3132 CHANNEL DRIVE
JUNEAU, ALASKA 99811-2500

About the Cover

Gerstle River

Alaska Highway

The Gerstle River Bridge (number 0520) was built in 1944 as part of America's World War II effort, linking Alaska to the Lower 48 contiguous United States via Canada. Governor Walter J. Hickel signed a bill in 1993 dedicating the bridge as the Black Veterans Recognition Bridge.

Alaska's Gerstle River bridge consists of nine, steel, 200 ft. long Warren through trusses, spanning the braided river at 1,820 feet in length.

The aerial photo of the bridge was taken via a drone demonstration project through the University of Alaska in July 2015 (drone owned and operated by M2 Flight Solutions of North Pole, AK). This view of the bridge was taken from the Canadian border end of the structure looking west toward Delta Junction, Alaska. A faint haze in the atmosphere was from forest fires in the area. M2's drone pilot and other personnel are in the lower, right hand corner of the picture.

INTRODUCTION

This bridge inventory report is a periodic publication by the Alaska Department of Transportation and Public Facilities, Bridge Section. Summarized within are structural, dimensional, and location data of bridges and culverts that are biennially inspected by the Bridge Section. Other bridge structures are included for reference and informational purposes. Bridge dimensions, minimum vertical clearances, minimum vertical underclearances and load postings are applicable at the time of publication, only. Each section is roughly organized starting in the northern most locations of the state.

An electronic copy is available online at www.dot.alaska.gov/bridge-inventory.

Description of Terms, Codes & Symbols

DESCRIPTION OF TERMS, CODES, AND SYMBOLS

ROUTE NUMBERS AND NAMES are given in the route listing section. If available, the coordinated data system (CDS) numbers are also listed.

BRIDGE NUMBERS AND NAMES are used by the Bridge Section to identify individual structures. The structures with a 4000 series bridge number designate large culverts that meet the definition of a bridge, having center line of roadway length greater than twenty (20) feet. structures with a 7000 series bridge number designate culverts or bridges that are less than twenty (20) feet along center line and owned by DOT.

CDS ROUTE AND MILE POINT is the Coordinated Data System (CDS) highway route number and mileage location of each structure as recorded by the Alaska Department of Transportation and Public Facilities' Geographic Information Section. A CDS route number adjacent to the bridge name signifies that CDS route that is carried on the structure (the structure may be listed by the route that passes under the bridge).

For example:

CDS Mile Pt.	Bridge Number	Bridge Name	Structure Type
		Glenn Highway – CDS #135000	
0.7	2209	Bragaw Overcrossing (CDS 133950)	PCBT/A

Glenn Highway passes under the Bragaw Overcrossing. The Bragaw Overcrossing bridge carries Bragaw Street over the Glenn Highway.

HISTORIC MILEPOST is the mileage from each actual or theoretical milepost.

LENGTH of each bridge is to the nearest foot, measured from back to back of the backwalls of the abutments.

WIDTH is measured to the nearest tenth of a foot and is the roadway width of the structure, or the distance between the curbs or rails.

VERTICAL CLEARANCE is recorded to the nearest hundredth of a foot. It is the distance from the bridge deck to the lowest obstruction over any part of the roadway width. Measurements indicated in this book are the reported clearances at the time of publication, only.

VERTICAL UNDERCLEARANCE is recorded to the nearest hundredth of a foot. It is the most minimum distance from the roadway below the bridge to the lowest part of the structure. Measurements indicated in this book are the reported clearances at the time of publication, only.

LOAD POSTED signifies bridges that are load restricted at the time of publication, only. Contact DOT&PF's Commercial Vehicle Customer Service Center, 1-800-478-7636, for specific bridge related load posting details or restrictions.

YEAR BUILT is the year of original construction or reconstruction of a structure.

COMMENTS are remarks used internally by the Bridge Section to note special bridge conditions and observations.

DESCRIPTION OF TERMS, CODES, AND SYMBOLS (continued)

STRUCTURE TYPE are standard abbreviations used by the Bridge Section to identify the main material and configuration of the superstructure.

DECK TYPE are standard abbreviations used to identify the main material of the deck.

WEARING SURFACE identifies the actual running surface on the structure's roadway.

Suspension	S
Timber Arch	TA
Timber Deck Truss	TDT
Timber Pony Truss	TPT
Timber Stress Laminate	TSL
Timber Stringer	TS
Timber Through Truss	TTT
Treated Timber Arch	TTA
Treated Timber Deck Truss	TTDT
Treated Timber Pony Truss	TTPT
Treated Timber Stringer	TTS
Treated Timber Through Truss	TTTT

Listed below are additional suffixes that may be used to further describe structure types:

Continuous Bridge	C
Moveable Bridge	M

DECK TYPE CODE SYMBOL

Filled Steel Grid	FSG
Laminated Timber	LT
Precast Reinforced Concrete	PRC
Reinforced Concrete	RC
Steel Grid	SG
Steel Plate	SP
Timber (detail not known)	T
Timber Plank	TP
Timber Stress Laminate	TSL
Treated Timber Plank	TTP

(continued on next page)

Listed below are additional suffixes that may be used to further describe deck types:

Asphalt	A
Running plank	R
Treated (preservative treated) .....….....	T

Additional code symbols, such as LOG, SLAB, DOCK, or BULKHEAD are used and are self-explanatory. The term PIONEER denotes a primitive type of construction, usually a combination of logs and timber beams. BAILEY and ACROW denote a military or modular type of steel pony truss.

EXAMPLES:

SS/RC is a steel stringer bridge with a reinforced concrete deck.

TTS/TTPR is a treated timber stringer bridge with a treated timber planked deck with running plank.
