## Airport Flight Information System
### Customers Have Access to All Arrival and Departure Times

*Anchorage, Alaska November 26, 2002* – Flight arrival and departure information for airlines operating at Ted Stevens Anchorage International Airport is now available on screens throughout the South (Domestic) and North (International) terminals as well as on line at www.anchorageairport.com.

"This Flight Information Display System will give passengers access to the latest airline arrival and departure information", said Airport Director Morton V. Plumb Jr. "Many Alaskans will find that having the information displayed on the Airport's website is especially convenient."

Two banks of flight information displays are located in the South (Domestic) terminal and one in the North (International) terminal of the Airport. More displays are planned for the near future.

The Airport's internet site is www.anchorageairport.com. Alaskans will find the on-line arrival and departure information system extremely easy to use.

In addition, the system is capable of displaying public service and emergency information or even revenue enhancing-advertising.

Miamisburg, Ohio-based Com-Net Software Specialists is responsible for design and system integration of the Airport installation. Clarity Visual Systems,

Inc., a leading manufacturer of Digital Visual Messaging (DVM) solutions, provided 14 high-resolution 40-inch Wildcat® AP/LCD™ rear-projection displays. Clarity is headquartered in Wilsonville, Oregon.

More than 45 scheduled carriers provide passenger and cargo service to the Airport, including service to international points.  The Airport serves over 5 million passengers every year, operates the world's busiest floatplane base, and ranks as the number one airport in North America in terms of landed weight of all-cargo aircraft.

Information about the Airport can be found at www.anchorageairport.com.
