

Contracts - Watering (Measurement & Payment)

BACKGROUND: For agency personnel to use agency views to record measurement of water trucks and calculate traffic control watering item information on a Contract, you must first add the appropriate agency views to the contract and contract item(s). Use the *Agency Views - Adding for Contracts* QRG to add AV: Water Truck Measurement to your Contract and the *Agency Views - Adding for Contract Items* QRG to add AV: Watering to your traffic control or watering Contract Item(s). By adding a water truck to the AV it is then available for use on the DWR Item Posting when you calculate and pay on traffic control and watering items. The calculation of Daily Water Loads -> MGALS will be calculated using the AV: Watering on the item posting. This total can be used to plug into a traffic control spreadsheet for the contractor to sign, or posted straight to the quantity if the method of measurement is MGALS.

ROLES: Construction Office Engineer, Construction Project Engineer

NAVIGATION:

Construction > Contract Progress

1. From the Contract Progress Summary, click the **Component Actions Menu** in the upper right corner.
2. In the Views section, select **AV: Water Truck Measurement**.
3. Click the **New** button to add a row for a new water truck measurement.
4. Enter data in the Agency View fields.
5. Click **Save**.
