# Introduction

Alaska Marine Highway System, Annual Traffic Volume Report 2024

## **Alaska Marine Highway System**

The Alaska Marine Highway System (AMHS) serves 33 Alaska ports by transporting passengers and vehicles between coastal communities. This service helps meet the social, educational, health, and economic needs of Alaskans.

AMHS provides year-round scheduled ferry service throughout Southeast and Southwest Alaska, extending south to Prince Rupert, British Columbia and Bellingham, Washington. The system connects communities with each other, regional centers, and the continental road system. It is an integral part of Alaska's highway system, reaching many communities that would otherwise be cut off from the rest of the state and nation. AMHS also provides a coastal transportation alternative between Anchorage and the "Lower 48" states versus driving the Alaska Highway.

AMHS is designed to provide basic transportation services to communities; transportation that allows community access to health services, commodities, legal services, government services, and social services; transportation that meets the social needs of isolated communities; and transportation that provides a base for economic development.

### **Service and Amenities**

AMHS service is divided into two major systems: the Southeast System (from Bellingham north to Yakutat) and the Southwest System (from Cordova west to Unalaska / Dutch Harbor). The Alaska Marine Highway fleet consists of nine vessels; four operate in the Southeast System, two operate in the Southwest System, and three are in long-term layup for most of the year. All nine vessels are designed to carry passengers and vehicles ranging in size from motorcycles to large freight container vans.

Trips on AMHS can last several hours or several days, so passenger services are an important aspect of the state's transportation service. Most vessels provide food service, shower facilities, observation lounges, and recliner lounges. The larger vessels provide additional amenities, including play areas for children. Four vessels have stateroom accommodations for overnight travel, or for passengers who want a space they can call their own while traveling.

### **Freight Transport**

One regular use of AMHS is the year-round shipment of container vans. These vans transport time-sensitive cargo such as fresh vegetables, meat, and dairy products from Bellingham and regional Alaska centers to communities served by the system. Local restaurants, grocery stores, individuals, and food distribution businesses have established delivery schedules with AMHS to ensure regular and continuous delivery of perishable goods. Shipping perishable supplies on AMHS is more cost-effective than air freight, and in many cases ensures delivery to communities on a more frequent basis than commercial barge and freight lines. Vans are also used to move fresh Alaska fish and seafood to markets, and to transport U.S. mail and household goods.

## **Planned Service Reductions**

During the fall, winter, and spring months, all vessels are scheduled for annual maintenance. This normally requires a six-to-eight-week lay-up period resulting in reduced service for each ship. Major projects to refurbish the vessels and to keep them in compliance with SOLAS (Safety of Life at Sea) requirements also keep vessels out of service. Vessels are put into lay-up during periods of low traffic demand, or to reduce operating costs. During 2024, each AMHS vessel was out of service for maintenance, project work, or lay-up status. Please refer to page 11 for a full operating schedule.

## **Comparisons to Previous Years**

For the year 2024, counts are based on tickets that were issued for the sailings. This method should not affect the traffic totals or the traffic between ports when compared to previous years; however, some counts may not be accurate when subtotaled by vessel. Furthermore, the following points should be considered:

- During 2019, summer ferry traffic was negatively impacted due to the Inland Boatman's Union strike.
- During 2020, ferry traffic was drastically impacted due to the Coronavirus (COVID-19) pandemic.
- During 2021, ferry traffic continued to be impacted by the (COVID-19) pandemic and the ongoing closure of the Canadian border.
- On June 1, 2022 the *MV Malaspina* was sold to Ward Cove Dock Group, LLC. The vessel will be used in a historic restoration effort to showcase Ketchikan's logging and maritime history for the Ketchikan-based visitor's business.
- During 2023, ferry traffic continued to rebound post (COVID-19) pandemic with increases in passengers and vehicles across Southeast and Southwest regions.
- The *MV Matanuska* had no sailings in 2023 and 2024 and is currently being used for employee housing.
- During 2024, no cross-gulf trips occurred due to staffing challenges and vessel availability.
- In July 2024, a celebration was held in Kodiak to commemorate the Tustumena turning 60 years old.

## **Current Construction Projects**

As the *MV Tustumena* ages, there are plans in place for her retirement and replacement with a vessel that provides greater capacity, modernized safety features, increased seaworthiness, and enhanced passenger comfort. The Tustumena replacement vessel project received federal funding from the Infrastructure Investment and Jobs Act (IIJA) and the new vessel design work should be completed in late 2025.

The *MV Tazlina* was built as a day boat and does not have existing crew quarters. The vessel received IIJA funding to undergo construction and modification to add crew quarters to enhance its versatility and add to the fleet's operations.

Several projects have been started for improvement to terminals throughout the system. These critical improvements to ferry dock infrastructure are necessary to keep the system functioning.

## Southwest Alaska Routes

The Southwest system serves Prince William Sound, the Kenai Peninsula, Kodiak Island, and the Aleutian Islands. The *MV Tustumena* provides regular service between Homer, Seldovia, Kodiak, Ouzinkie, Port Lions, Chignik, Sand Point, King Cove, Cold Bay, False Pass, Akutan, and Dutch Harbor. The Aleutian Chain trip is not made in the winter due to adverse weather conditions.

Tourist passengers add a significant percentage to Prince William Sound traffic in the summer, especially between Valdez and Whittier. The economy began to realize gains in the travel market in 2010, which were then realized in overall ridership of the Alaska Marine Highway System. Prince William Sound traffic has remained strong after a peak in 2011. The Southwest routes connect to the continental road system at Valdez, Whittier, and Homer, Alaska. During 2024, *MV Aurora* provided regular service between Cordova, Tatitlek, Valdez, Whittier, and Chenega Bay.

## Cross Gulf Service

When the *MV Kennicott*, a vessel certified to operate in open waters, joined the fleet in summer 1998, the ferry system expanded to include regular cross-gulf sailings. These sailings connect Southeast Alaska with the South Central and Southwest regions of the state.

## Southeast Alaska Routes

The Southeast AMHS route system is divided into two subsystems - the "mainline" routes which typically take more than one day for the ship to travel, and shorter routes where the vessels depart their home port in the morning, travel to destination ports, and then return to their home port on the same day. The shorter routes are commonly referred to as "day boat" routes.

The mainline routes carry a high percentage of tourists and vehicles in the summer and provide service between Bellingham, Washington or Prince Rupert, British Columbia, and Skagway or Haines, Alaska. Along the way, the ships stop in Ketchikan, Wrangell, Petersburg, Sitka, Juneau, and Haines. Although Kake and Hoonah are smaller communities, they are also served by certain mainline sailings.

During 2024, two AMHS vessels were used on the Southeast mainline routes - these were the *MV Kennicott* and *MV Columbia*. The day boat routes connect the smaller communities of Southeast Alaska with each other and with the Southeast Alaska mainline communities (Ketchikan, Petersburg, Wrangell, Sitka, Juneau, Haines, and Skagway) that serve as regional centers for commerce, government, health services, and/or connections to other transportation systems. The day boat routes primarily serve local residents and include Angoon, Gustavus, Hoonah, Kake, Metlakatla, Pelican, and Tenakee.

In 2024, there were three AMHS vessels that provided service on the day boat routes - these were the *MV LeConte*, *MV Hubbard*, and *MV Lituya*. The *MV Lituya* provides day boat service between Ketchikan and Metlakatla (Annette Bay).

The Southeast system connects with the continental road system at Bellingham, Washington, in Prince Rupert British Columbia, and in Alaska at Haines and Skagway.

# Historical Traffic

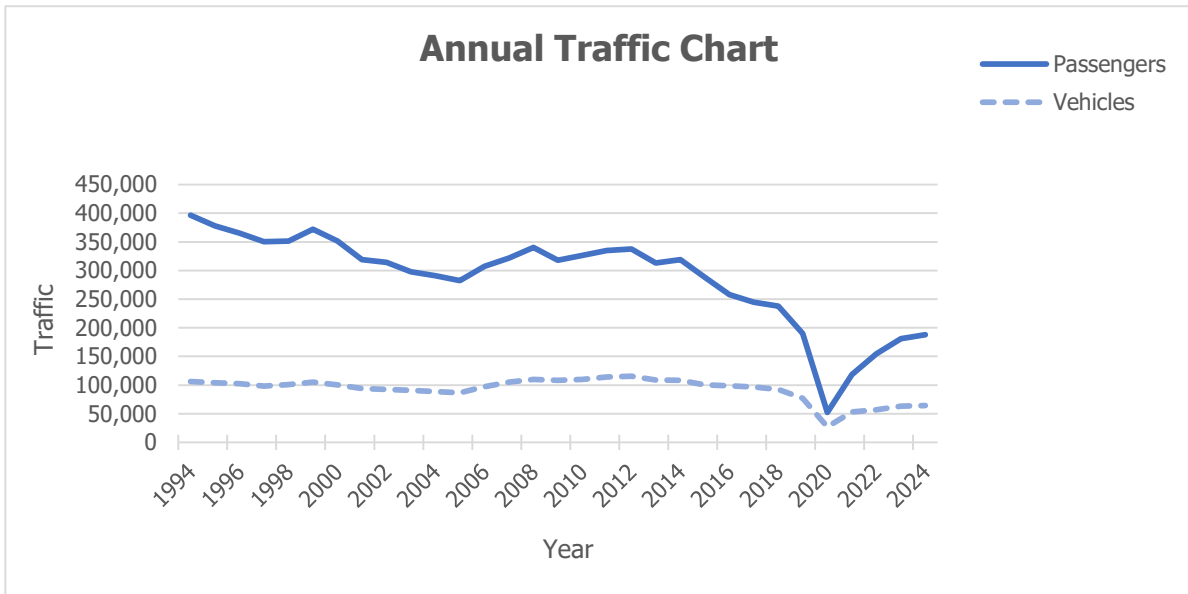

Alaska Marine Highway System, Annual Traffic Volume Report 2024

Source: Annual Traffic Volume Reports (Link Volume Summary Reports). Percentage change is calculated from the prior year and all traffic is included with the exception of excursion trip passenger traffic. For 1998 through 2004, excursion trips were offered. 2013 marked the 50th anniversary of AMHS and as part of the celebration, two excursion trips were offered: one to Misty Fjords and one to Tracy Arm. In 2018, an excursion trip to Misty Fjords was offered.

# Current Annual Traffic

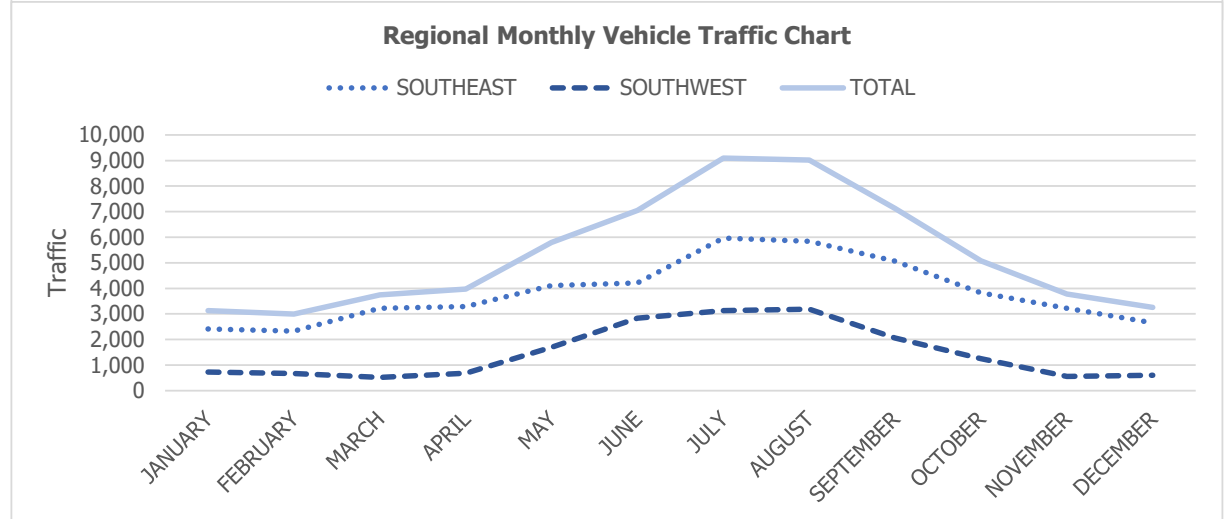

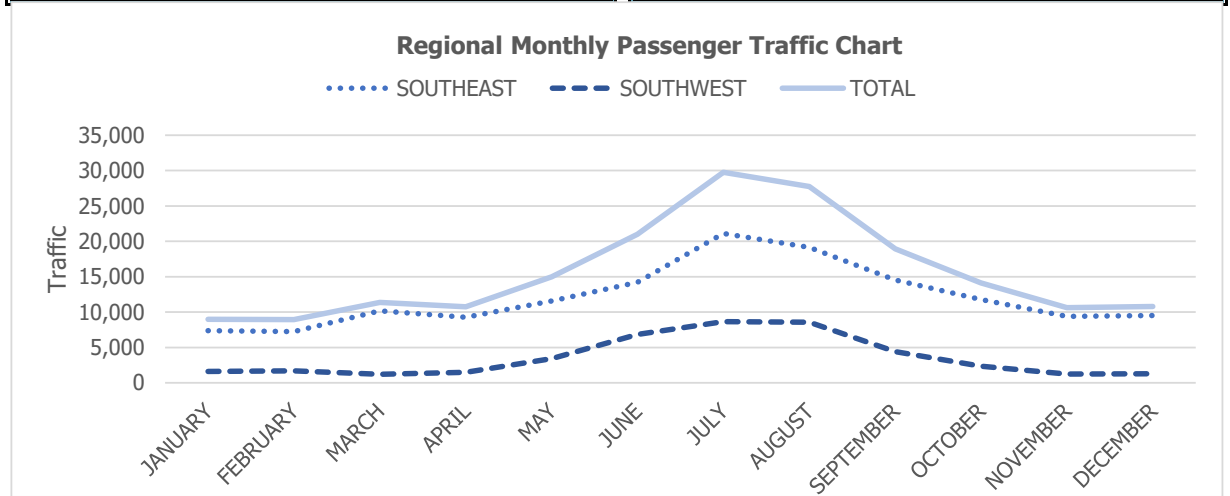

Alaska Marine Highway System, Annual Traffic Volume Report 2024

The tables and charts in this section provide a visual summary of the traffic data collected from the Passenger and Vehicle Traffic Summaries by Month; this traffic is shown both by region and by types of vessels (as described below).

The Regional Monthly Traffic tables and charts on page 32 break the traffic down by region, utilizing passenger and vehicle counts to / from ports in the Southeast Region, and then counts to / from ports in the Southwest Region. The steep bell curves display the seasonal nature of AMHS traffic, a pattern that is repeated consistently from year to year.

### Regional Monthly Traffic

# Monthly Port Traffic

Alaska Marine Highway System, Annual Traffic Volume Report 2024

The data in the traffic tables is generated by the Carus Reservations System (CarRes). The following is a brief explanation of the terms used and a description of the reports.

A “passenger” is any individual who got on or off the vessel, including drivers, infants, partial-fare travelers, and anyone traveling on a pass.

A “vehicle” is any passenger or cargo conveyance transported on the vessel, including construction equipment, container vans, motorcycles, unaccompanied cars shipped by dealers, and employee cars traveling on a space available basis. The vehicle count is not related to size; i.e. a 40-foot van is counted as one vehicle, as is a 15-foot compact car.

The count of passengers, vehicles and cabins is derived from reservation information for specific vessels. A traveler who must transfer vessels to reach a destination or who is traveling on vacation and stopping to visit several communities is counted more than once. For example, a traveler from Pelican to Bellingham will show up in the passenger count as one who embarked at Pelican and disembarked at Juneau. This person will also be counted as one who embarked at Juneau and disembarked at Bellingham.

These tables provide the monthly total of embarking and disembarking passengers and vehicles by port. This summary gives an overview of seasonal travel trends and allows the reader to easily identify the busiest and slowest ports and travel months. Information is provided for the total system by geographic area and by vessel.

The quantity of passengers and vehicles embarking and disembarking in the regional charts presented on pages 36-39 do not match due to the fact that the *MV Kennicott* loads or off-loads passengers and vehicles in both the Southeast and Southwest regions. For example, when a passenger embarks in Ketchikan (Southeast) and disembarks at Whittier (Southwest), the actions are recorded and reported in the appropriate region.

**Southeast Passengers**

# Port to Port Traffic (On / Off)

Alaska Marine Highway System, Annual Traffic Volume Report 2024

These tables summarize inter-port passenger and vehicle traffic. They provide origin-destination information for analyzing through-traffic movements on the vessels. Information is provided for the total system for the year by geographic area (Southeast, Southwest, and Cross-Gulf) and by vessel. The report also includes summary tables for the summer season. These On / Off tables do not reflect the origin-destination of passengers and vehicles that transferred to another vessel. They show where the traffic boarded the vessel and then traveled to, by port, for that particular vessel.

**Southeast On/Off: Calendar Year**  
(January 1 - December 31)

# Link Volume Summary

Alaska Marine Highway System, Annual Traffic Volume Report 2024

The link volume summary reports are used to establish a measure of capacity utilized, relative to the capacity provided. The reports show the traffic and capacity on each "link" of the system. A "link" is defined as a departure from one port and an arrival at the next. A complete trip usually consists of several links. For example, a passenger going from Juneau to Skagway in one trip would typically travel on two links "Juneau to Haines" and "Haines to Skagway." This passenger would be counted as one on each of these links. Consequently, the link volume count includes both the through-traffic and the traffic embarking from the first port in the link pair.

The link volume for each pair of ports is directional, with the port of origin appearing first. The link volume for "Bellingham-Ketchikan" indicates the total traffic northbound between Bellingham and Ketchikan with no intermediate stops. Cross-gulf links are listed in a separate table named "Cross-Gulf Link Volume."

Link volume data is provided by geographic area and by vessel. Reported information includes a passenger and vehicle count, total passenger and total vehicle miles for each link, the capacity ratios for both passengers and vehicles, the number of trips, trip length, and total miles of each link. Furthermore, monthly Link Volume Tables are provided by region. In these tables, only total counts for passengers, vehicles, and trips by month are provided.

The link volume data is useful because of the finite capacity of the vessels and the variation in size from vessel to vessel. 125 passengers on the *MV Aurora* traveling from Petersburg to Kake would have the same passenger link volume capacity ratio, 50%, as 225 passengers traveling on the *MV Kennicott*. High link volume ratios indicate that additional service may be warranted.

## Passenger Capacity

As the Vessel Information Table on page 11 shows each vessel with functional booking limits rather than the maximum capacity as authorized by the United States Coast Guard (USCG). AMHS occasionally increases the capacity on "full" sailings to accommodate additional passengers, but it never goes beyond the USCG limit.

Following the example set in 1996, the functional booking limit for each sailing is used to calculate capacity ratios for the 2023 report. Prior to 1996, reports used a number closer to the USCG limit. This change results in a higher capacity ratio on most links, but more accurately reflects the percentage of usable passenger space.

## Vehicle Capacity

This report continues to use linear feet to measure vehicle capacity. Vehicle capacity ratios are calculated by dividing the total linear feet sold on the car deck by the vehicle capacity in linear feet. The capacities used in the 1994 and 1995 reports were based on an analysis of fiscal year 1994 sailings. For the 1996 and subsequent reports, the vehicle capacity used has been changed to reflect the amount of space used for booking purposes.

The actual amount of "sellable" space on the car deck depends on the amount of open space between vehicles, needed for maneuvering vehicles on the car deck, and for pathways for people entering or exiting their vehicles. The mix of vehicles can affect this non-sellable space, as well as the number of vans being carried.

When comparing multi-year data, it is important to note the differences in vehicle capacity ratio calculations or the results will indicate an artificial change. The number of vehicles per link and the number of trips per link can be used to evaluate whether increases or decreases in link volume capacity ratios are significant or just reflect a change in the methodology.

# Stateroom Usage

Alaska Marine Highway System, Annual Traffic Volume Report 2024

These reports focus on stateroom usage and are similar to the Link Volume Summary Reports of Passengers and Vehicles. Of the 9 vessels in the AMHS fleet, four have staterooms: the *MV Columbia*, the *MV Kennicott*, the *MV Matanuska*, and the *MV Tustumena*.

The reports show the percentage of cabins used on each link and are reported by geographic region and vessel. Regional reports of stateroom usage are displayed alphabetically by embarking port and capacity ratio. Individual vessel tables provide the link volume ratio by month. The years 2000 through 2024 Annual Traffic Volume Reports are based on counts from issued tickets (pre-sailing data). Years prior to 2000 were based on counts from used tickets (post-sailing data).

**Columbia Staterooms**  
 (104 Staterooms)
