

PLACK ROAD BICYCLE/PEDESTRIAN FACILITY

February 2013 Update

We are currently evaluating our proposed design alternative along Plack Road and the impacts it will have on ROW, utilities, and the overall project corridor. Final ROW Base Mapping, utility impacts, design features, and project data is being researched and compiled to be used to formulate a design study report. This report will serve to initiate approval to begin finalized design and plan set preparation for this project. All final Environmental documents, permits, utility contracts, and possible ROW impact work will take place as final design documents are being prepared. Our current estimate is that construction will begin in the Summer of 2014.
