1.0 INTRODUCTION

On January 24, 2005, a Notice of Availability of the Supplemental Draft Environmental Impact Statement (EIS) for the Juneau Access Improvements Project was published in the *Federal Register*, marking the beginning of the public review period for the document. At the same time, copies of the Supplemental Draft EIS were made available at the Juneau, Haines, and Skagway public libraries. Printed copies of the document were also distributed to the cooperating agencies and other interested agencies. Compact Disk (CD) copies were distributed to organizations and individuals who submitted comments during the 2003 scoping period or requested to be on the EIS mailing list. Printed copies of the Supplemental Draft EIS and CDs were available for free by request from the project information center in the Mendenhall Mall in Juneau, at the Alaska Department of Transportation and Public Facilities (DOT&PF), and at public hearings held in Juneau, Haines, and Skagway. The full sets of appendices were available on CD for free, or printed copies could be obtained from the DOT&PF for a \$100 printing charge. The Supplemental Draft EIS and all of the appendices were also available for review or download from the project website. The public review period ended on March 21, 2005.

During the review period, public testimony was recorded at four public hearings held in Juneau on February 16 and 17, in Haines on February 23, and in Skagway on February 24, 2005. Comments were also submitted by the public, organizations, and governmental agencies by letter or on comment sheets available at the project information center and the public hearings. Comments were submitted by e-mail, mail, hand-delivery, or fax to the project office. All comments received or post-marked by or on March 21, 2005 are included in this Comment Analysis Report (CAR).

This CAR summarizes the submissions and testimony received during the public review of the Supplemental Draft EIS. Most of the testimony and written submittals contained multiple comments about the Supplemental Draft EIS and the alternatives considered for the project. These comments were identified and, where possible, grouped into issue categories (e.g., terrestrial habitat, air quality, transportation). Some comments did not readily fall into a specific issue category. These comments were placed into a "Unclassified Comment" category.

Many comments in each issue category raised similar concerns. Therefore, it was possible to group comments into a single statement of concern (SOC). These SOCs are provided by issue category in Section 4 of the CAR. In some cases, a single statement was sufficient to capture the meaning of all the comments attributed to that SOC. In other cases, it was necessary to provide further explanation to capture the range of meanings among a group of similar comments attributed to an SOC.

Each comment has been assigned a unique alphanumeric identifier so that comments can be referenced back to the originator. Section 2 of the CAR describes the process and methodology used to track and code comments received during the public review period. A brief overview of the number of comments and the general types of comments received on the Supplemental Draft EIS is provided in Section 3.

Two indices are provided at the end of this report. The first index provides an alphabetical list of individual commentors and their corresponding SOCs. The second index provides an alphabetical list of organizations (i.e. government jurisdictions and private organizations) and their associated SOCs. These two indices provide a means for commentors to locate their comments and identified SOCs.

2.0 COMMENT ANALYSIS PROCESS

The analysis of public comments on the Supplemental Draft EIS was a multi-stage process that included coding, sorting, and summarizing public comment submissions and testimony into a SOC. The process is described in detail below.

2.1 SUBMISSION TRACKING

All submissions were assigned a unique identifying number by DOT&PF in the general order received. Each person testifying at a public hearing was also assigned a unique number preceded by the letter 'H'. In addition, each comment letter or testimony was assigned an alphabetic prefix indicating whether it came from a State of Alaska or federal governmental agency (SA and FA, respectively); local agency (LA); organization or group (OR); or the general public (PC).

2.2 CODING

After being assigned an alphanumeric identifier, each submission or individual testimony was reviewed to identify the comments within it. Each comment was assigned a unique code number, which included the alphanumeric identifier of the submission or testimony. This ensured that each comment had a unique alphanumeric description that could be readily referenced back to the originator. Once comments were identified, they were assigned to one or more issue categories that reflected the substance of the comment. After all of the submissions were coded, the comment code numbers were transferred into a database along with the name of the commentor, date received, and contact information.

2.3 ISSUE CATEGORIES AND STATEMENTS OF CONCERN

The coded comments in each issue category were reviewed to identify similarities among comments. All similar comments in an issue category were grouped together and a single SOC that captured the meaning of those comments was prepared. In some cases, a simple statement was sufficient to capture the meaning of all the comments. In other cases, further description was needed beyond the SOC to ensure that all facets of the comments were addressed. Finally, a global review of the SOCs was completed to minimize duplication. Similar statements were combined under one SOC where possible.

3.0 PUBLIC COMMENT OVERVIEW

DOT&PF received a total of 1,373 written submissions during the public review period and oral testimony from a total of 227 individuals who attended the four public hearings held in Juneau, Haines, and Skagway. Of the 1,600 submissions or individual testimony, 23 were duplicates. Approximately 79 individuals sent in multiple submissions or submitted written comments in addition to oral testimony. There were also 32 joint submissions, with multiple signatures or multiple people listed in a single submission. Two State of Alaska Legislative Resolutions were also received; they were not evaluated as comments but will be referenced in the Final EIS.

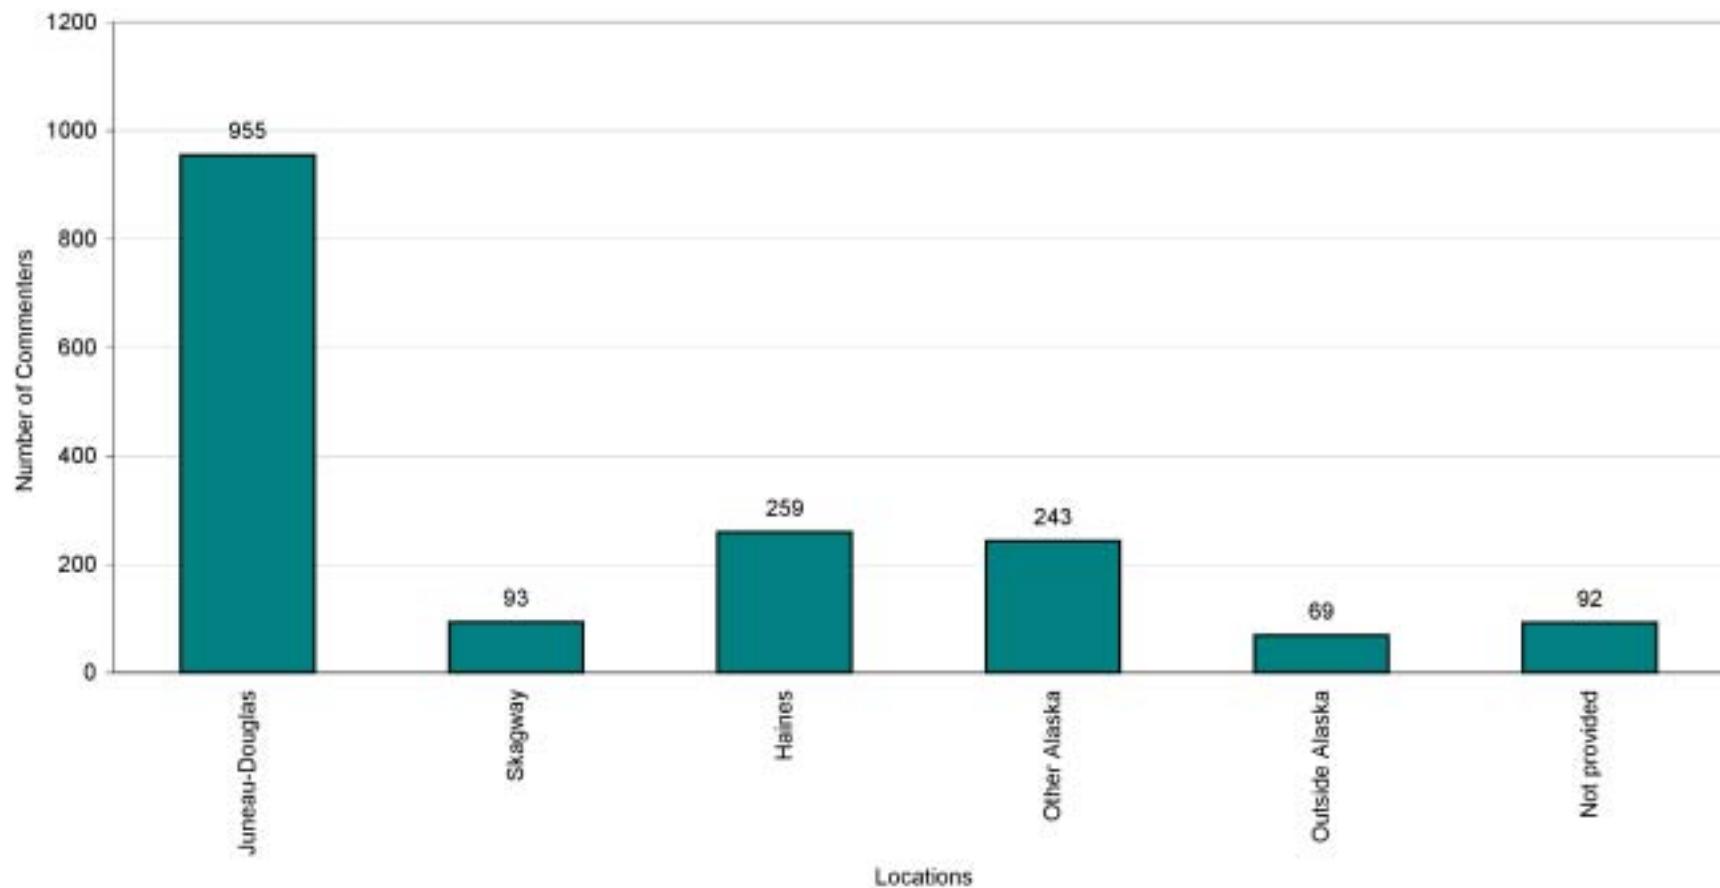

Submissions often contained comments addressing more than one issue. For example, a submission may state opposition to one alternative, support for another alternative, and reasons for that choice. Approximately 11,000 comments were identified. Comments within each submission or individual's testimony were identified and coded as described in Section 2. Individuals, agencies, or organizations could submit more than one set of comments. Each set of comments was coded, although care was taken to not duplicate identical comments from the same submitting individual, agency, or organization.

The following figures provide a general overview of the comments received. Figure 1 illustrates the geographic distribution of comments received. Figure 2 groups comments into broad topics, such as avalanche hazards, economic impacts, and wildlife impacts. This figure reflects the number of times comments regarding these topics were raised in the submissions and testimony. Figure 3 identifies the number of commentors who expressed support of one or more of the project alternatives.

Not all commentors identified a preference for a specific alternative; some indicated a general preference for a road alternative or a marine alternative, or no preference at all. Because these general preferences are of interest to decision makers as well as the public, they have been identified in addition to the specific alternative preferences. Figure 4 provides a comparison of comments that generally favored a highway based alternative and those that favored a marine (ferry) based alternative. These numbers represent comments that were grouped into a relevant SOC in the "alternatives" issue category. The codes for SOCs considered to support a highway are ALT01, ALT04, ALT05, ALT06, ALT07, ALT08, ALT14, ALT15, and ALT20 (see Section 4). The codes for SOCs considered to support marine based transportation are ALT02, ALT03, ALT09, ALT10, ALT11, ALT12, ALT13, ALT16, and ALT19 (see Section 4). Preferences for the No Action Alternative as well as suggested changes to the current system or marine alternatives were interpreted as a preference for a marine alternative, unless a statement to the contrary was made. Similarly, suggested changes to East or West Lynn Canal Highway alternatives were interpreted as a preference for a highway alternative.

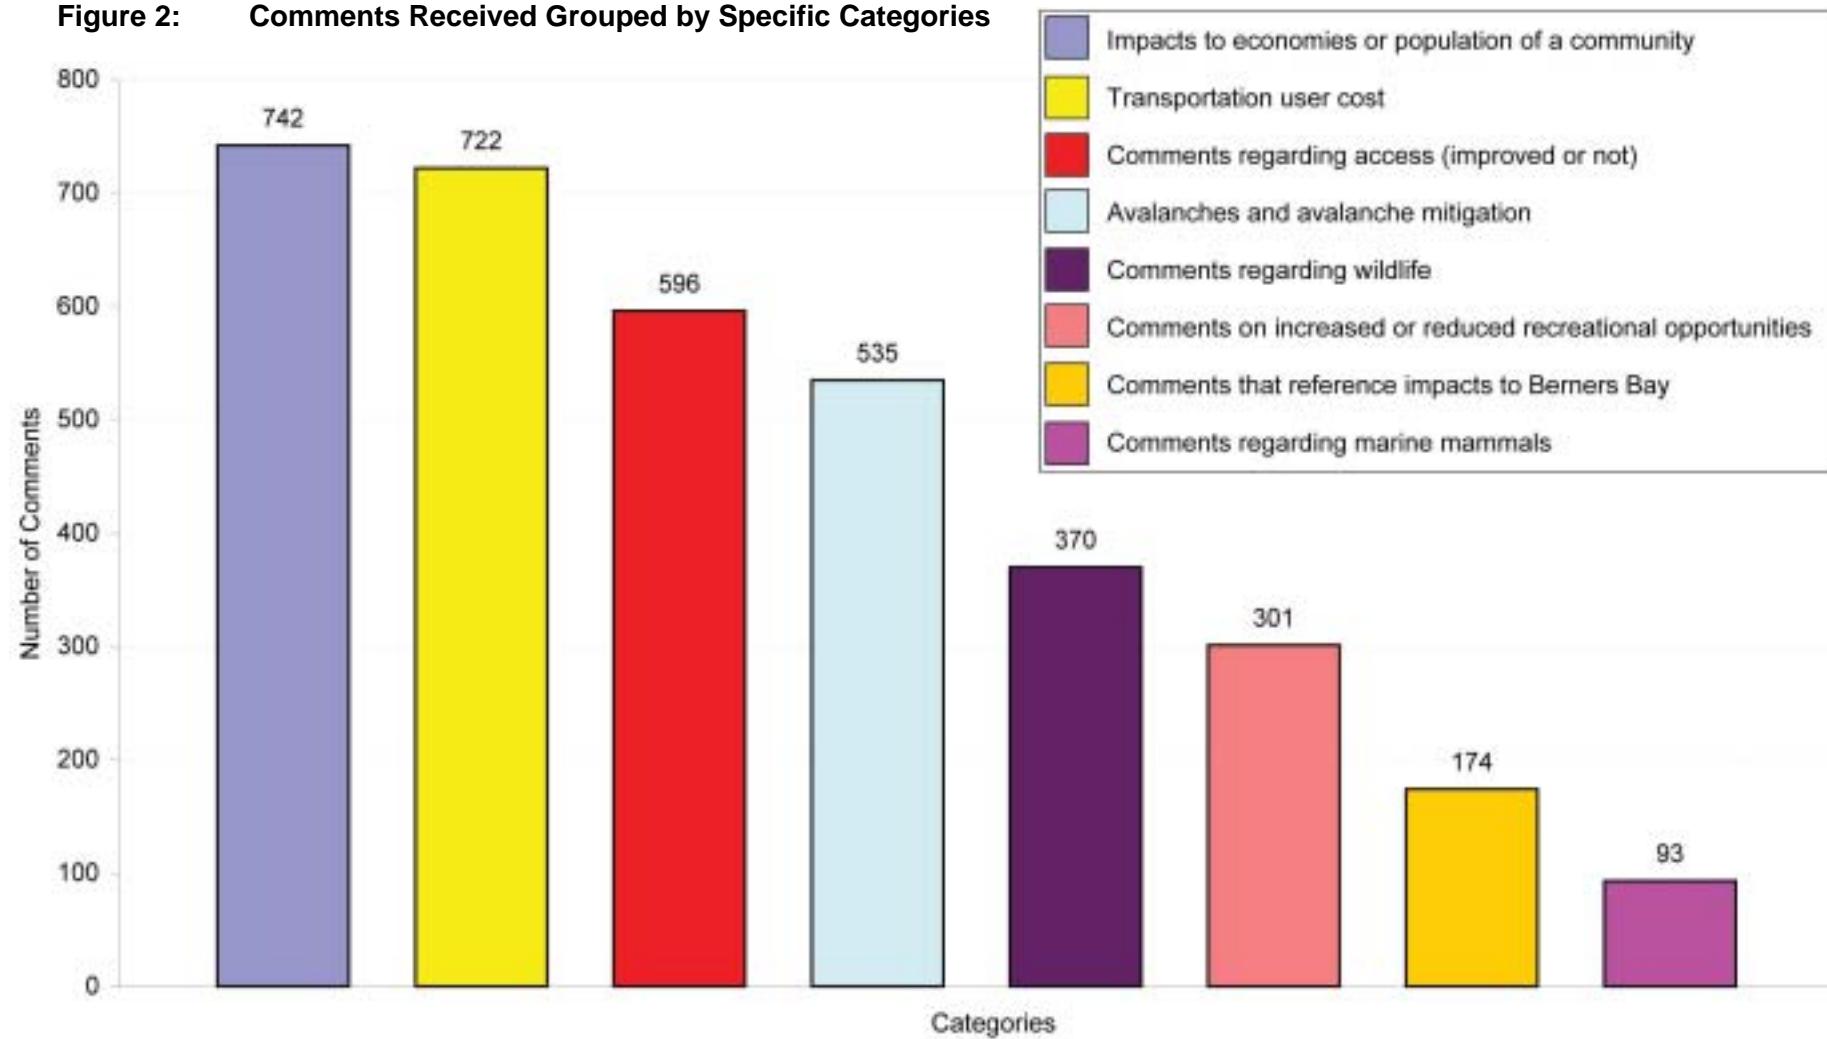

Figure 4 depicts comments in two ways. For the 'Submissions' columns, each submission was counted only once, regardless of the number of persons or organizations identified in the letter. In the "Commentors" columns, each identified commentor is counted, regardless of whether they submitted a separate or joint submission (identified commentors are those that provide a first initial or name and last name). In each comparison, an individual or organization was only counted once. The only exception was in the cases where a person represented an organization during public testimony, and at a later date provided written comments representing only themselves.

Figure 1: Distribution of Submissions by Location

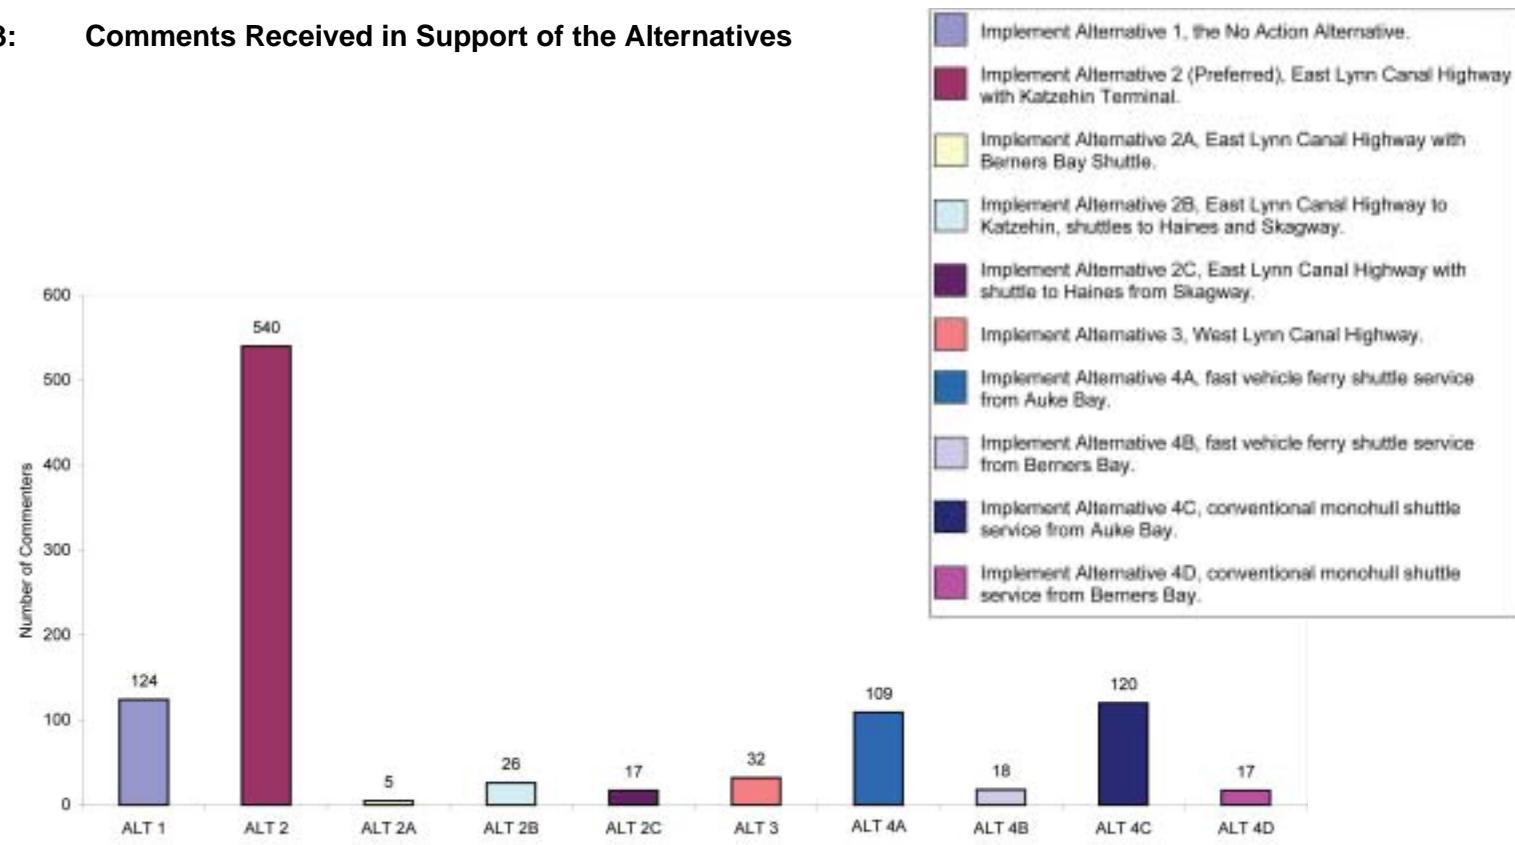

Note: Comments are summarized by geographic location of the submitter. Juneau-Douglas includes the City and Borough of Juneau; Haines includes the surrounding Haines Borough. Most of the comments included under "Other Alaska" were received from the Anchorage bowl area.

Figure 2: Comments Received Grouped by Specific Categories

Note: This figure identifies some of the most prevalent issues raised in comments on the Supplemental Draft EIS. These categories are combinations of more than one SOC within a general issue category and do not necessarily correspond directly to a single issue category or SOC in Section 4 of this report.

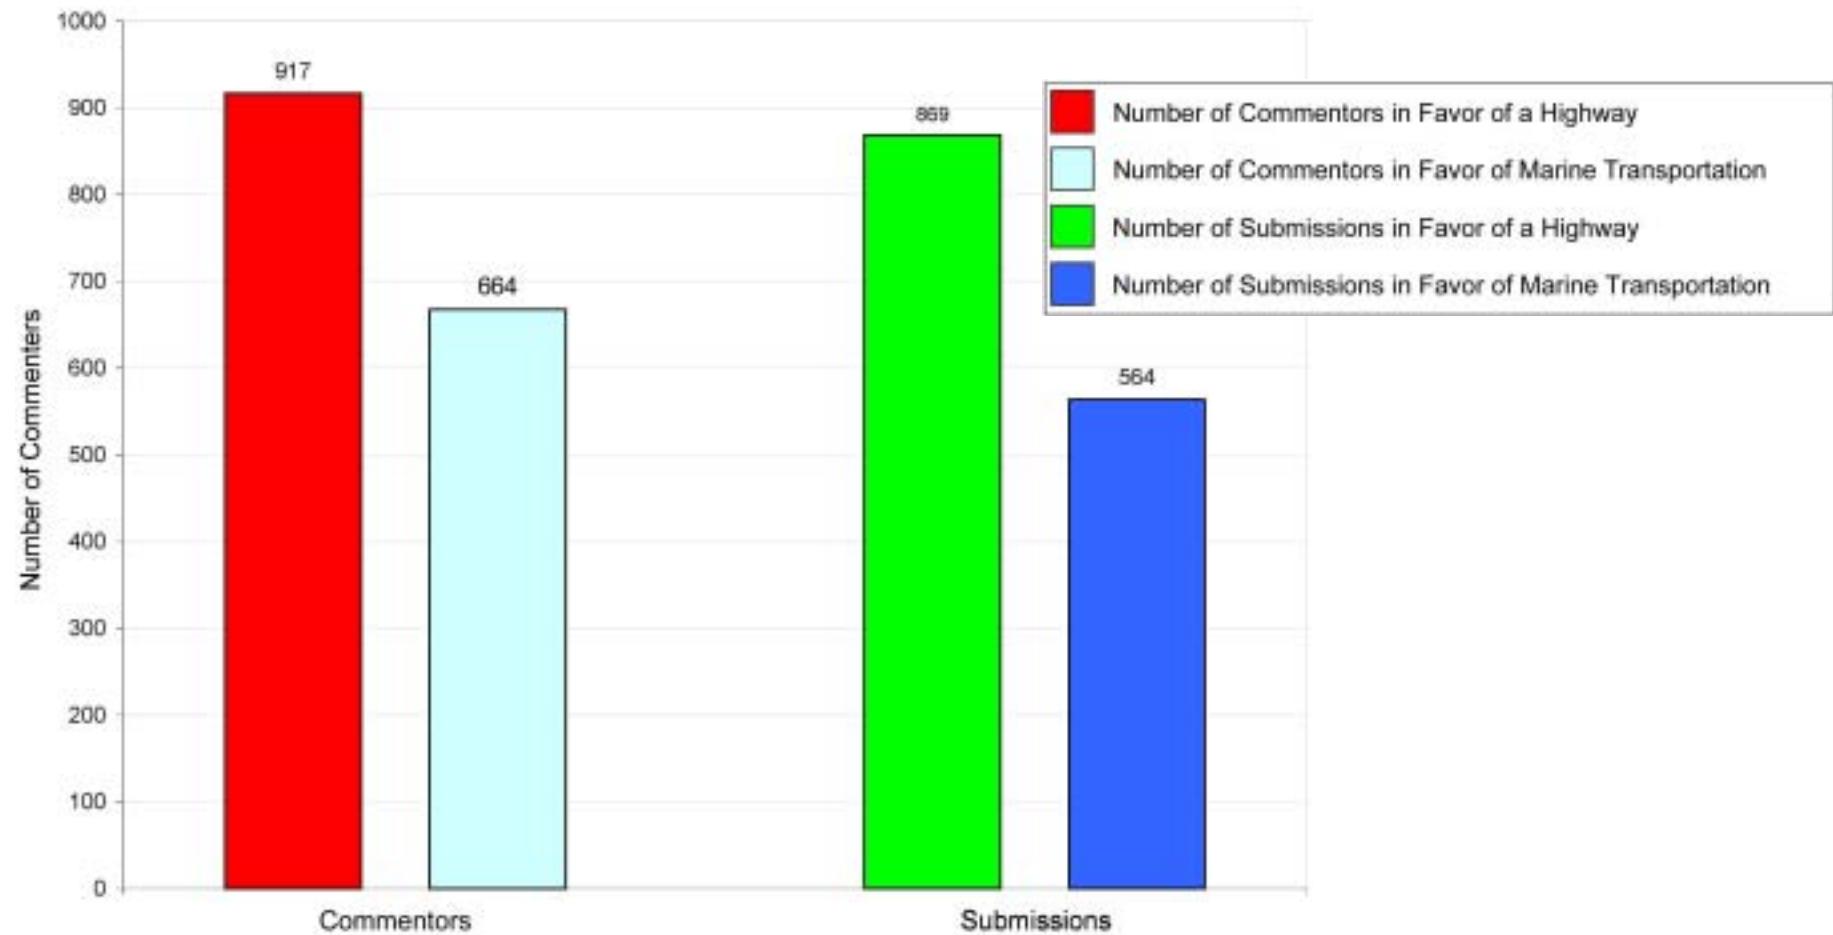

Figure 3: Comments Received in Support of the Alternatives

*Occasionally, a submission would receive the same code (for example in separate comments within the same submission). These were counted as only one instance for the purposes of this figure.

Note: This figure relates the number of commentors that identified one of the alternatives in the Supplemental Draft EIS as the commentor's preferred alternative. It should be noted that often, submissions contained no designated preferred alternative, multiple preferred alternatives, simply stated a general statement for any highway alternative, against any highway alternative, for a marine alternative, or against any marine alternatives.

Figure 4: Comparison of Comments Received Expressing Support of a Highway or Marine Alternative

Note: SOCs used to determine highway support include ALT01, ALT04, ALT05, ALT06, ALT07, ALT08, ALT14, ALT15, and ALT20. The SOCs used to determine support of marine based transportation include ALT02, ALT03, ALT09, ALT10, ALT11, ALT12, ALT13, ALT16, and ALT19.

4.0 STATEMENTS OF CONCERN BY ISSUE CATEGORY

The following section presents the SOCs by issue category. Each SOC has a three-letter indicator for the issue category followed by its specific number within that issue category. Where warranted, additional text is provided to clarify which comments were captured within a specific issue category and to demonstrate comment variations captured within a specific SOC.

4.1 AIR QUALITY (AIR)

AIR01: A highway in Lynn Canal would increase air pollution.

- A highway would increase air pollution and worsen global warming.
- Vehicles using the highway would increase carbon dioxide emissions and affect air quality.

AIR02: The ferry system creates more air pollution than a highway.

- Construction of the highway would result in reduced emissions because the ferry system would use more fossil fuels than the vehicles using a highway.
- The highway could provide land access to Alaska Electric Light and Power, expanding power to Haines and Skagway and thereby reducing air pollution and dependence on existing power plants.

AIR03: The air quality analysis in the Supplemental Draft EIS is inadequate.

- Discussions on air quality should be updated with information on ambient air quality in Skagway.
- The air quality analysis of the preferred alternative is too simplistic and the Federal Highway Administration (FHWA) and DOT&PF have failed to thoroughly examine air quality impacts of highway alternatives.
- The Supplemental Draft EIS bases all of the air quality analysis on a 1994 air quality report, which stated that “ambient air quality is good and carbon monoxide levels are well below maximum allowable levels.” This report was not cited, which prevents one from verifying the information or examining its methods. Also, the report should be replaced with a new air quality study.
- Information on the finding of no effects to the Mendenhall Valley non-attainment area is cursory and insufficient. Also, there should be discussion of the potential air quality impacts in places other than Mendenhall Valley.

4.2 ALTERNATIVES (ALT)

ALT01: A highway should be the main mode of surface transportation under the Juneau Access Improvements Project.

General support for construction of a highway is voiced but a preference for one or a combination of the highway alternatives is not stated.

ALT02: A highway should not be built as part of the Juneau Access Improvements Project.

ALT03: Implement Alternative 1, the No Action Alternative.

ALT04: Implement Alternative 2/Preferred Alternative, East Lynn Canal Highway with Katzehin Terminal.

ALT05: Implement Alternative 2A, East Lynn Canal Highway with Berners Bay shuttle.

ALT06: Implement Alternative 2B, East Lynn Canal Highway to Katzehin, shuttles to Haines and Skagway.

ALT07: Implement Alternative 2C, East Lynn Canal Highway with shuttle to Haines from Skagway.

ALT08: Implement Alternative 3, West Lynn Canal Highway.

ALT09: Implement Alternative 4A, fast vehicle ferry shuttle service from Auke Bay.

ALT10: Implement Alternative 4B, fast vehicle ferry shuttle service from Berners Bay.

ALT11: Implement Alternative 4C, conventional monohull shuttle service from Auke Bay.

ALT12: Implement Alternative 4D, conventional monohull shuttle service from Berners Bay.

ALT13: Marine-based transportation should be the main mode of surface transportation in Lynn Canal but no preference for any of the marine alternatives is identified.

- The current ferry service is adequate and preferable to a highway.
- Improved ferry service is preferable to a highway.
- DOT&PF should continue or increase its support of the Alaska Marine Highway System (AMHS).
- The topography of the region dictates marine-based transportation over a highway.

ALT14: Modifications should be made to East Lynn Canal Highway alternatives.

Suggested modifications that apply to all of the East Lynn Canal Highway alternatives include the following:

- The Juneau Access Improvements Project should include additional infrastructure, such as hiking trails, rest stops, parking areas, scenic pullouts and overlooks, campgrounds, public boat-launch ramps, emergency communication services, and right-of-way space for utility easements, along the proposed routes.
- Highway design should meet minimum standards for sight distance and width of paved shoulders to accommodate bicyclists.
- Public bus service should be available for pedestrians.
- The dirt road to Echo Cove should be paved.
- Backup ferry service should be provided during highway closures or when avalanche hazards are high.
- Highway maintenance should be suspended during winter.
- There should be reduced or inexpensive fares for the shuttle ferry segments of the alternatives.

- There should be round-the-clock maintenance workers on the highway to reduce the number of highway closures.
- The approach into Skagway should occur further north than is planned.
- Instead of using shuttle ferry service from the east side of Lynn Canal to Haines, East Lynn Canal Highway alternatives should include construction and maintenance of a highway between Skagway and Haines.

Suggested modifications that are specific to Alternative 2/Preferred Alternative include the following:

- Include additional mitigation measures: reduce excess rock quantities by incorporating raised grades, flattened slopes, tunnel segments, and community project needs wherever practicable; identify and evaluate methods to minimize impacts of excess material wasting into the marine intertidal and subtidal areas; and, incorporate wildlife corridor crossings along the highway in areas of known wildlife movement and use, particularly Berners Bay.
- Include construction of a combination boat-launch ramp and emergency shuttle ferry terminal at Sherman Point.
- Include, instead of the *M/V Aurora*, a mainline ferry that has an open car deck and an enclosed passenger compartment.
- Include constructing a ferry terminal in the downtown Haines waterfront area instead of using the existing Lutak Terminal. It could be incorporated with the pending Haines Small Boat Harbor Expansion Project.
- Construct the highway from Juneau north in case funding is suspended, and the *M/V Aurora* should be used as a dayboat to service Skagway, Haines and Juneau until construction is completed.
- Include bear/wildlife corridors under the highway and the costs of these corridors should be included in the alternatives analysis.
- A bridge spanning Berners Bay should be considered.
- Do not include shuttle ferry service between Haines and Skagway; motorists can drive between the two communities.

Suggested modifications that are specific to Alternative 2A or 2B include the following:

- A combination of Alternatives 2A and 2B should be constructed: stop the highway at the Katzehin Terminal and run shuttle ferry service from Katzehin and from new terminals constructed in Berners Bay.
- Alternative 2B should have one less ferry for upper Lynn Canal and shuttle service between Haines and Skagway should occur every third trip.
- Alternative 2B should include use of the *M/V Fairweather* as a dayboat that would make a daily round trip from Haines-Skagway-Haines-Juneau then return to homeport in Haines each day.
- Alternative 2B should use the *M/V Fairweather* for shuttle service.
- Alternative 2B should include construction of a new ferry terminal at the proposed Haines Harbor Development or at the downtown waterfront area instead of using the existing Lutak Terminal.

- Alternative 2B should use the Haines-Katzehin ferry as a dayboat to Juneau during times of high avalanche danger.
- Alternative 2B should include tunnels, avalanche sheds, diversion structures, and raised roadbeds to mitigate avalanche hazards.
- Alternative 2B should include a public dock and a long-term parking area at the Katzehin Ferry Terminal.
- Alternative 2B should include frequent pullouts and rest areas.
- Alternative 2B could include highway construction on the west side of Lynn Canal up the Ferebee River Valley. The highway could continue through a tunnel that could be cut to the creek south of Face Mountain and continue north around Dyea to Skagway.
- Alternative 2B should include several mitigation measures: the Katzehin Ferry Terminal should be built on the Katzehin River Delta; there should be no highway segment north of the Katzehin River; and, there should be no bridge constructed over the Katzehin River.

ALT15: Modifications should be made to the West Lynn Canal Highway alternative.

- Public bus service should be available for pedestrians.
- Highway design should meet minimum standards for sight distance and width of paved shoulders to accommodate bicyclists and meet federal specifications for driving lane widths, shoulder widths, and the speed limit.
- Alternative 3 should use one shuttle ferry instead of two between Berners Bay and William Henry Bay.
- Extend West Lynn Canal Highway to cross the Chilkat River at Mile 7 Haines Highway to reduce bridge length from over a mile to less than 700 feet.
- Alternative 3 should include more lookouts and should not include man-made forms that would block motorists' views, except to mitigate impacts to wildlife.
- Alternative 3 should continue the West Lynn Canal Highway north around Lutak Inlet and up the Ferebee River Valley for approximately eight miles (where a tunnel could be cut to the creek south of Face Mountain) and continue the highway from Haines around Dyea and into Skagway.
- Going up the Chilkat River several miles to where the river narrows could shorten the Pyramid Island crossing.
- Shorten the southern shuttle ferry crossing by crossing near Comet to the west side of Lynn Canal behind or south of Sullivan Island.

ALT16: Modifications should be made to the No Build Alternative or to the marine alternatives.

- Marine alternatives should include state-provided bus service to accommodate foot passengers.
- Modified ferry service routes, schedules, or changes in type of vessel used should be considered.

ALT 17: Identify the expected locations of components of the highway alternatives and provide additional information about the ferry shuttle services for these alternatives.

- Provide information on the locations of maintenance stations, construction camps, materials staging areas, and related sites that are part of the highway design.
- Provide details on how the alignment enters Skagway and if houses or businesses would need to be removed.
- Include the expected cost and hours of operation of the shuttle ferries associated with the road alternatives.

ALT 18: DOT&PF should consider rail transportation as a mode of transportation for the Lynn Canal corridor.

ALT 19: Consider new marine alternatives.

New ferry routes, new ferry schedules, changes and preferences in vessels or vessel types, and the establishment of a Lynn Canal Ferry Authority are suggested:

- Consider the marine alternative submitted by the Lynn Canal Transportation Project and for which a business plan has been provided.
- Include front-opening ferries to speed the loading and off-loading processes.
- Buy a new vessel the size of the *M/V Taku* for cost savings and safety reasons.
- Run two loops per day from Juneau-Haines-Skagway-Haines-Juneau. Use one boat, such as the *M/V Fairweather*, and one crew. This would be a less expensive and often more appropriate ferry route/schedule (suggested by the Derecktor Shipyard) than any of the four marine alternatives, which employ four boats, nearly doubling fuel and crew costs, and decreasing capacity.
- The *M/V Fairweather* is the most appropriate ship for Lynn Canal.
- Schedule twice-weekly *M/V Fairweather* service in Lynn Canal, for cheaper access than the East Lynn Canal Highway.
- Use the *M/V Fairweather* in the summer, and the *M/V Taku* or the *M/V Aurora* as a winter dayboat.
- Give Sitka the *M/V Fairweather* to shuttle passengers to Juneau.
- Create better schedules by offering improved combinations of routes and choices between fast and slow ferries.
- Fast ferries do not belong in Lynn Canal.
- Get a *M/V LeConte*-size ferry; use it to service Haines and Skagway daily, departing from Echo Cove.
- Bring the ferry terminal back into downtown Juneau.
- Possibly privatize or model the ferry system after the Alaska Railroad.
- The *M/V Taku* should depart from Haines to Echo Cove to service the upper Lynn Canal on a daily basis.
- Increase ferry service in the winter in upper Lynn Canal.
- Increase the number of ferries the size of the *M/V Fairweather* to service Lynn Canal.

- De-link upper Lynn Canal ferry service from the rest of the mainline service. End mainline service in downtown Juneau. Ferry shuttle service can begin at Sawmill Cove.
- Provide four fast vehicle ferries to make daily runs between Juneau and Skagway/Haines.
- Lower the costs of ferry use.
- Provide daily ferry service in the summer during the day.
- Two vessels of the *M/V Fairweather* class servicing the Lynn Canal segment of the AMHS could run profitably.
- Consider running a new, more efficient, and higher capacity mainline vessel as part of the Lynn Canal mainline component.
- Improve the ferry schedule.
- Create a ferry authority to improve profit and take care of future traffic demand.
- Offer a short ferry run and a ferry that leaves from Skagway to Haines every morning and returns every night.
- Build two ferries for cars and passengers; homeport one in Juneau and the other in Skagway or Haines to make daily loops of upper Lynn Canal.
- Improve the road north of Juneau to Echo Cove, and build a ferry terminal there, with a day ferry service to Haines and Skagway.
- Use some type of hovercraft to improve the existing system.
- Research improvements done by Prince of Wales Island and model a ferry system after their success.
- Build a model based on the Lynn Canal traffic to better address ferry system needs and potential.

ALT20: Consider new highway alternatives.

- Build a highway that would connect to the Klondike Highway but bypass Skagway.
- Build a highway that would connect southeast Alaska with the continental highway system via the Bradfield Canal route.
- Build a highway along the Taku River Valley or to Tulsequah to connect to a Canadian road.

ALT21: Consider building a tunnel under Lynn Canal to provide transportation within the corridor.

ALT22: Consider establishing an investment fund, similar to the permanent fund to finance marine-based transportation within Lynn Canal.

ALT23: Expand the analysis of the highway alternatives to verify assumptions made in the Marine Segments Technical Report and to integrate existing AMHS assets.

ALT24: Identify if staged or phased construction of highway alternatives is being considered and if so, discuss these scenarios and their predicted direct, indirect, and cumulative effects in the EIS.

ALT25: Discuss the implications of constructing a highway with lane and shoulder widths that are less than the American Association of State Highway and Transportation Officials (AASHTO) or Alaska National Highway System (NHS) standards.

ALT26: Choose one of the other alternatives that would have fewer impacts than Alternative 2/Preferred Alternative.

4.3 AVALANCHE/WEATHER (AVA)

AVA01: Safety of the highway alternatives in light of potential avalanche hazards should be considered.

- Public safety and logistics of emergency vehicle response for accidents occurring as a result of avalanche hazards has not been considered.
- Engineering can minimize or eliminate avalanche hazards for the highway alternatives.
- Explain an Avalanche Hazard Index (AHI) of 30 or lower being standard for a safe highway.
- An AHI of 24 is barely below 30, therefore the highway would be marginally safe.

AVA02: Logistics and feasibility of maintaining highway alternatives during winter weather and/or avalanche conditions should be considered.

- Provide additional analysis on how avalanche activity would compromise the highway's accessibility and reliability.
- Highway maintenance during winter weather is not feasible.
- The duration of highway closures is underestimated.
- Who would be responsible for highway maintenance?
- Climate forecasts should not be used to show avalanche danger would be lower in the future. Forecasting methods are inaccurate.

AVA03: The safety and/or utility of a highway alternative during adverse weather conditions, independent of avalanche activity, should be considered.

- Provide additional analysis on how ice, fog, snow, whiteouts, wind, and rain would compromise the highway's accessibility and reliability.
- The safety of persons traveling a highway during adverse weather conditions should be considered.
- Discuss how emergency vehicles would respond to accidents along the highway route that are caused by adverse weather conditions.
- Discuss how ice would be mitigated, how fog-related ice buildup on bridges would be mitigated, and the cost of these mitigation measures.

AVA04: Provide information on the risk of traveling by ferry and air services in adverse weather conditions.

- Provide safety and logistical information on sailing and docking fast vehicle ferries in wind, high seas, waves, and fog.

- Provide safety and logistical information on docking ferries at the Katzehin Ferry Terminal when strong northern winds and/or waves occur.
- How safe is traveling by air service during adverse weather conditions?

AVA05: Highway closures in the EIS should include closures on the Klondike Highway.

- The number of days the Klondike Highway is closed should be included in the EIS, given that these closures would impact the number of days access to Juneau would be feasible under one of the highway alternatives.
- The EIS should include the causes for closures of the Klondike Highway and incorporate the information into the analysis of all alternatives.

AVA06: Avalanche mitigation such as tunnels, snow sheds, and bridges should be considered; proposed avalanche mitigation measures may be inadequate.

- Additional mitigation measures such as snow sheds, tunnels, and bridges to avoid avalanche areas and protect highway travelers from avalanche activity should be included in the EIS.
- The proposed avalanche mitigation measures may be inadequate.
- Further analysis should be performed to show the effectiveness of different avalanche mitigation designs.
- Discuss how DOT&PF would deal with un-detonated explosives used for avalanche mitigation.

4.4 BALD EAGLES (EAG)

EAG01: Alternative 2B is a good option because it avoids many eagle nests.

EAG02: Highway alternatives may impact eagles.

- The highway would come within ½ mile of 100 eagle nests and would degrade critical nesting habitat and productivity in upper Lynn Canal.
- The East Lynn Canal Highway alternatives would impact eagles in Berners Bay and most certainly violate the 330-foot required nest-tree buffer.
- Increased human/eagle interaction may also have a negative impact on eagles. Although some eagles could habituate to disturbance from the highway, many others would be forced to relocate.
- Alternative 3 would have the greatest impact on eagle nests.

EAG03: The East Lynn Canal Highway should be built; eagles would adapt.

Eagles presently live in close proximity to highways and other disturbed areas near Juneau. The highway as proposed under Alternative 2 would be far enough away from any nests that the eagles would adapt to the disturbance.

EAG04: The Supplemental Draft EIS does not adequately assess/characterize impacts to eagles. Additional analyses on impacts and mitigation measures should be conducted.

- Discuss the impacts of windthrow on eagles and the associated mitigation measures.

- Discuss how equipment would be moved around avoidance areas.
- Provide an explanation for the assertion that the eagles go elsewhere.
- Provide the analysis that concludes that highway impacts would cumulatively result in “no adverse effect.”
- The EIS needs to provide more discussion on how a 330-buffer would protect eagles from a highway. Provide justification for the 330-foot buffer and for infringement upon that buffer.
- Discuss how DOT&PF can justify asking United States Fish and Wildlife Service (USFWS) for authorization for highway construction activities within 330 feet of active nests for up to 57 percent of nest trees.
- Examine best management practices (BMPs) for blasting and construction activities to minimize the potential for accidental damage to nest trees.
- Discuss the procedures for procuring “take” permits under the Bald and Golden Eagle Protection Act.
- Conduct more analysis and provide more discussion of the potential impacts from a highway to eagles. Also, identify mitigation measures, such as screening eagle trees.
- Fifty-seven percent of the eagle nest trees would be within 330 feet of Alternatives 2 (Preferred Alternative) and 2C. Discuss why the number of trees within the 330-foot buffer has quadrupled in comparison to the 1997 EIS.
- The EIS should address how “not likely to adversely affect the overall populations” would comply with the Bald and Golden Eagle Protection Act that protects specific individual birds and nests rather than a population.
- The EIS needs to include specific BMPs to minimize damage to trees used for nests, perching, winter roosting, and buffer.

EAG05: Modifications to Alternative 2B would avoid some eagle nests.

To avoid eagle nests make the following modifications to Alternative 2B:

- Move the Katzehin Ferry Terminal south of the Katzehin River Delta.
- Remove the highway segment north of Katzehin River.
- Remove the bridge over the Katzehin River.

4.5 CULTURAL, HISTORICAL, AND ARCHAEOLOGICAL RESOURCES (CUL)

CUL01: The highway would affect ancestral burial grounds and village sites.

- Members of the Tlingit community are concerned about impacts to their burial grounds, particularly in the Berners Bay area.
- A highway would impact Spirit Mountain (Lions Head), which is a sacred site where shaman spirits are believed to dwell.
- The EIS should discuss reported village sites such as those near Slate Creek Cove, the mouth of Lace River, and between Lace and Berners rivers.

CUL02: Many people depend upon the traditional, cultural, and spiritual uses of Lynn Canal resources. The highway alternatives would jeopardize these resources.

CUL03: The Supplemental Draft EIS underestimates impacts on cultural and historic resources.

- The agencies did not gather sufficient data to evaluate eligibility of sites for the National Register of Historic Places, and agency determinations are unclear.
- The analysis as presented does not comply with National Historic Preservation Act (NHPA) of 1966 and no details are provided regarding tribal consultation.
- The analysis does not fully evaluate options to minimize impacts to historic and cultural resources.
- Because a complete archaeological inventory of the proposed routes was not done, it is incorrect to state that none of the build alternatives would have an adverse effect on cultural resources or historical properties.

CUL04: A highway alternative would impact the historic nature of the Klondike Gold Rush National Historic Park (NHP), Skagway and White Pass National Historic Landmark (NHL), Chilkoot Trail, Dyea NHL, and the City of Skagway Historic District.

The road would have visual and auditory effects on the Skagway & White Pass District NHL and the Klondike Gold Rush NHP. Further studies must be conducted to evaluate effects. Concerns for the NHP include viewshed, change of experience, historic recreation uses, and cultural resources at Sturgill's Landing and Sawmill Site, Lower Dewey Lake Dam site, Kastle Kern, and historical advertisements.

CUL05: Formal concurrence on impacts has not been obtained from the State Historic Preservation Officer (SHPO) or the National Park Service (NPS), as is required by Section 106 of the NHPA.

Contrary to statements in the Supplemental Draft EIS, SHPO has not yet concurred on the assessment of effects. SHPO has only concurred with the Federal Highways Administration (FHWA) findings regarding eligibility of historic properties. In addition, the Supplemental Draft EIS implies that the discussion of effects on NPS physical property has been agreed to by NPS. This is not the case.

CUL06: Include population estimates for the Chilkat Indian Village Tribe (Klukwan), Chilkoot Indian Association, and the Skagway Tribe organized under the 1934 Indian Reorganization Act (IRA).

CUL07: Meaningful government-to-government tribal consultation needs to take place. A listing of tribal leaders that DOT&PF has consulted with should be included in Chapter 7.5 in the EIS along with the results of that consultation.

4.6 EDITORIAL AND DOCUMENT MANAGEMENT (EDI)

EDI01: Specific editorial comments on the Supplemental Draft EIS.

- Correct the names of vehicles or services.
- Correct misspellings.
- Answer questions pertaining to maps or tables in the Supplemental Draft EIS or provide additional maps and tables:
- Provide maps so we could compare the various alternatives.

- Provide construction window times in a graph or table form – it is difficult to understand when construction would occur that would not affect fisheries resources.
- The Dewey Lakes Recreation Area should be added to Figure 3-5 and re-titled/update legend accordingly.
- The Essential Fish Habitat (EFH) Assessment should augment Figure 4 of Attachment C (see *SEACC letter and attachments*) to show the location of recent and historical herring spawning areas in Berners Bay relative to the proposed road and ferry terminals, and Kensington Mine marine transport facilities.
- In some cases, references were not included, or they were inaccurate.
- The EFH Assessment (Section 5.9.3, page 5-43) needs clarification on the source for the statement made regarding hydrocarbon toxicity to aquatic life. It is cited as a United States Forest Service (USFS) document, but it appears that the source is the Kensington Mine EIS. Also, add the citation to the list of references.

EDI02: The Supplemental Draft EIS estimates that mitigation measures would cost \$5 million but does not include sufficient information for the public to evaluate the accuracy of these cost estimates.

4.7 ENERGY (ERG)

ERG01: Construction of the highway would reduce the amount of fossil fuels burned and generally be more energy efficient than the ferry system.

Ferries consume more fuel than cars; the highway would reduce our consumption of fossil fuels.

ERG02: Construction of the highway would increase our reliability on non-renewable resources.

- Energy-efficient transportation is provided by the ferry system.
- Ferries are the most energy-efficient form of mass transit.
- The highway would force residents to use more non-renewable energy and would contribute to our dependence on oil and increased pollution.
- Flying into Juneau would be more energy-efficient than driving.

4.8 ENVIRONMENT (ENV)

ENV01: Building a highway would have unacceptable impacts to the general environment and to natural resources.

- A highway on east or west Lynn Canal would irreversibly damage the delicate and unique natural setting and ecosystem of the Lynn Canal corridor.
- Wilderness that has not been fragmented by development provides valuable wildlife habitat, and public lands along the proposed highway alignment should remain protected.
- The cost resulting from the damage to the environment of Lynn Canal from a highway does not justify the benefits.
- Increased traffic due to the highway would lead to trash and dumping of garbage and cutting of trees for campfires along its length.

- Environmental impacts from the No Action or marine highway alternatives would not lead to increased environmental damage and do not threaten the natural environment.

ENV02: Building a highway and ferry terminals would result in unacceptable environmental impacts to Berners Bay.

- Construction of a highway or ferry terminals in and around Berners Bay would cause irreversible environmental impacts.
- A highway and ferry terminals would damage the wild character of Berners Bay and degrade the wildlife habitat of the region.
- Allowing traffic into the area from a highway would result in garbage dumping and trash on the beaches, ruining a wild and pristine area.
- Berners Bay is within easy access to Juneau and provides visitors with a roadless, wild area of high value for recreation, hunting, and subsistence, and should remain roadless.
- Berners Bay is a congressionally protected roadless area designated as wilderness.
- Costs to the environment from highway and ferry terminal construction around and adjacent to Berners Bay need to be evaluated and included in the EIS.

ENV03: A highway through Berners Bay along Lynn Canal can be constructed and mitigated in a way that would avoid significant impacts to the environment.

- Construction of a highway through Berners Bay would allow better access to views and enjoyment of the area.
- Environmental impacts from a highway would not be significant.
- Modern mitigation measures and construction methods can be used to decrease or prevent impacts to the environment.
- The ferry system has environmental drawbacks due to high fuel consumption, air pollution, and damage due to wakes generated by the ferries.

4.9 ENVIRONMENTAL JUSTICE (EVJ)

EVJ01: The highway would make travel more affordable for low-income populations.

- The highway would be beneficial to low-income populations who cannot afford the ferry.
- The highway considers environmental justice concerns.

EVJ02: The ferry system is more affordable than a highway alternative. The highway would be only for the rich.

- The highway would disproportionately impact low-income populations who do not own cars or who own cars that are too unreliable to travel a highway to Haines or Skagway.
- The ferry system is egalitarian and more affordable than the highway.
- Only private vehicles would be able to use the highway.

4.10 ESSENTIAL FISH HABITAT- MARINE AND FRESHWATER (EFH)

EFH01: Highway alternatives would adversely affect EFH.

- The construction of the highway would fragment and/or result in a loss of the most productive fish habitat in Southeast Alaska.
- Sidecasting and filling would impact juvenile salmon habitat along the upper east side of Lynn Canal.
- The highway would induce additional development in Berners Bay, further affecting the fish habitat in that area.
- Fuel releases and increased sediment load would degrade the water quality and adversely affect fish spawning areas and invertebrate populations.
- Highway and ferry terminal construction and operation would impact the spawning and rearing habitat for runs of herring; eulachon; sockeye, coho, pink, and chum salmon; steelhead and cutthroat trout; and Dolly Varden char.
- Alternative 2 would degrade herring spawning habitat between Echo Cove and Antler River.
- Alternative 2 would degrade eulachon spawning runs around Antler and Berners/Lace rivers.

EFH02: The Supplemental Draft EIS overestimates negative impacts on EFH.

Highways that are thoughtfully planned and constructed are compatible with protecting EFH. Fish are opportunistic and adapt to habitat changes. In fact, the highway could benefit fisheries through stream enhancements as has been observed in the Chilkat River, which parallels the Haines Highway.

EFH03: More analysis should be conducted on the impacts of the highway alternatives on EFH. These analyses should incorporate impacts from the construction, maintenance, and operations of both East and West Lynn Canal Highways, including bridges, and the ferry terminals. Conclusions of no adverse effects to EFH are unsupported by the Supplemental Draft EIS.

- The effects of bridges over the Antler River and eulachon habitat are inadequately characterized. Section 4.4.6.2 of the EFH Assessment should include information from the USFS and from Andrew Eller of the Juneau School of Fisheries and Ocean Sciences regarding recent studies of eulachon spawning grounds in the Antler River. This information is essential to determine how road crossings would affect eulachon spawning habitat in the Antler and Lace rivers.
- The effects of building a bridge across eulachon spawning habitat in the Antler and Berners/Lace rivers must receive more analysis. Section 5.2.1.1 of the EFH Assessment states the bridge crossing would be located above where pre-spawning adult eulachon aggregate. Eulachon spawn well above the proposed crossings in both river systems (Antler and Berners/Lace rivers).
- Section 5.2.1.1 of the EFH Assessment states that a road would not impact herring spawning in Berners Bay because in-water fill is not a component. Pollutants, especially hydrocarbons, in runoff from roads can reach spawning habitat.

- Section 5.9.3 of the EFH Assessment must consider impacts of oil spills when analyzing effects of ferry terminal operations on EFH species.
- No scientific data supports the statement on page 5-43 of the EFH Assessment that “... hydrocarbon levels near AMHS ferry terminals ... would be very low.” Marine transfer sites, road building, and motor traffic should not be considered in isolation. Baseline herring population data should be collected prior to construction in Berners Bay to be able to measure adverse impacts from oil toxicity on herring.
- Actual construction windows should be provided in order to understand impacts on EFH.
- Changes in water quality and salinity due to runoff and the subsequent effect on EFH are not discussed.
- Critical nearshore habitats and ecological requirements of juvenile salmonids are not considered.
- The direct, indirect, and cumulative effects of tidal fill on EFH are not addressed.
- The total surface area, both intertidal and subtidal, that would be buried by the sidecast material and other fill must be accounted for.
- Include information on the Berners Bay’s estuary circulation, as circulation is important to larval eulachon.
- Not all of the critical fish activities to avoid are identified/discussed.
- Update the list of streams used by eulachon and salmon and the stream classifications.
- Section 4.5 of the EFH Assessment fails to acknowledge the estuary at the head of Berners Bay and the importance of the eulachon-spawning habitat in Antler and Berners/Lace rivers. It fails to include the remnant herring-spawning habitat in east Berners Bay.
- Section 5.3.1.2 of the EFH Assessment should state that larval eulachon and capelin and adult herring use Berners Bay in winter months, including Slate Creek Cove. Also, eulachon spawn in Lace River.
- Section 4.4.6 of the EFH Assessment should include more of the species that feed on eulachon in Berners Bay.

EFH04: Modifications to Alternative 2B would avoid 13 stream crossings, including one anadromous river.

- Move the Katzehin Ferry Terminal south of the Katzehin River Delta.
- Remove the highway segment north of Katzehin River.
- Remove the bridge over the Katzehin River.

EFH05: With the exception of the No Action Alternative, all of the alternatives would have adverse effects on EFH.

- Ferry terminal construction at Sawmill Cove may degrade or destroy herring spawning habitat.
- Breakwater and vessel traffic near the Sawmill Cove Ferry Terminal may degrade adjacent herring spawning habitat.

- Vessel traffic, noise, and changes to intertidal/subtidal habitat may alter fish behavior in Berners Bay.
- In-water structures and vessel traffic may alter shoreline migration patterns of forage fish and juvenile salmonids, and shift predator-prey interactions.
- Contaminants from vessel fuel leakage, spills, and runoff may impair water quality.
- EFH may be largely affected by cumulative impacts.

EFH06: Provide measures for avoiding, mitigating, or offsetting the impact of the alternatives on EFH.

- Prohibit in-water construction activities when pre-spawning adult herring are in Berners Bay through the time of larval dispersal.
- Prohibit vessel operations from time of pre-spawning near Sawmill Cove through time of spawning completion as determined by the Alaska Department of Fish and Game (ADF&G).
- Prohibit vessel fueling from time of pre-spawning near Sawmill Cove through time of egg hatch, as determined by ADF&G.
- Institute a long-term monitoring program of the effects of construction and operation of the Sawmill Cove Ferry Terminal.
- Extend the east side highway to a ferry terminal north of Berners Bay with ferry service to a west side terminal north of Endicott River.
- National Marine Fisheries Service (NMFS) offers the following EFH Conservation Recommendations pursuant to Section 305(b)(4)(A) of the Magnuson-Stevens Act:
 - Realign the Berners/Lace and Antler River crossings as far upstream as possible to minimize adverse effects to instream flows.
 - Provide compensatory mitigation for loss of intertidal and subtidal wetlands, upon consultation with NMFS and other agencies.

EFH07: Update the EFH sections of the Supplemental Draft EIS to reflect the finalization of the NMFS Biological Opinion written for the Kensington Gold Project.

Section 4.4.6.1 of the EFH Assessment should be amended with additional information about herring from the NMFS Biological Opinion for the Kensington Gold Project. Preparation of a Biological Opinion by NMFS released to the public as Appendix J of the Kensington Gold Project Final Supplemental EIS in December 2004. This Biological Opinion and its cited references should be consulted for background information and conservation recommendations to protect EFH and included in the Administrative Record of the Juneau Access Improvements Project EIS.

4.11 FISH - MARINE AND ANADROMOUS - AND SHELLFISH (FSH)

FSH01: Construction and operation of the highway under Alternative 2/Preferred Alternative would impact fish stocks in Lynn Canal and Berners Bay.

- A highway would affect salmon, herring, and eulachon populations.
- Even small amounts of oil from highway runoff would affect fish and fish eggs in the nearby waters.

FSH02: The highway would open up areas to increased fishing pressure. The Supplemental Draft EIS does not adequately assess the impacts of increased fishing on streams particularly salmon and eulachon stocks.

Further analysis is required to assess impacts of increased visitation to streams formerly accessible only by boat, and increased fishing pressure on streams currently accessible on Juneau's road system.

FSH03: Impacts of the fast ferry operations on eulachon and herring have not been fully assessed.

FSH04: The Supplemental Draft EIS provides insufficient information to properly analyze impacts on fish.

There are additional data sources that are not included in the Supplemental Draft EIS. In particular, the Supplemental Draft EIS does not include recent life history, stock size, and run size information for eulachon.

4.12 GEOLOGY (GEO)

GEO01: Discuss potential impacts to the highway alternatives and to potential users from landslides, mudslides, rockslides, earthquakes, or collapse of underground caves.

Safety concerns for travelers and workers along the East Lynn Canal Highway due to the following hazards should be included in the EIS:

- Landslides, mudslides, and rockslides from construction.
- Compromised integrity of the hillside/highway following construction of the highway.

Additional evaluations and data on the following should be incorporated into the EIS:

- Landslides along the Taiya Inlet.
- Existing active faults under or near the East Lynn Canal Highway alignment (Denali, Chatham Strait, Chilkat River and Gastineau Channel Faults).
- Potential impacts from earthquake-triggered landslides, and underwater landslides that may also produce a tsunami.
- Environmental impacts from landslides, mudslides, or rockslides triggered by construction activities.
- Possible collapse of underground caves beneath the highway.

GEO02: Provide additional information about potential impacts to karst.

- The methodology and analysis used by DOT&PF to develop its estimate of the amount of karst along the West Lynn Canal Highway alignment and its vulnerability to highway construction needs to be clarified in the EIS.
- The estimates provided in the Supplemental Draft EIS do not correlate with the karst inventory done in 1998 by members of the Tongass Cave Project, Glacier Grotto, and USFS.
- Potential archaeological and paleontological aspects of caves associated with the karst landscape should be evaluated.

- An inventory of karst landscapes should be completed along the East Lynn Canal Highway alignment.
- The potential for collapse of caves and karst topography beneath the alignment should be evaluated.
- A better explanation of the karst vulnerability ratings should be provided in the EIS.

GEO03: Mitigation measures associated with the highway alternatives should be re-evaluated.

- Include mitigation measures for landslides along the East Lynn Canal Highway alignment.
- Geotechnical studies along the alignment are necessary to better evaluate potential landslides and determine mitigation measures.
- A geotechnical evaluation and resulting costs of mitigation measures should be included in the EIS.

4.13 HAZARDOUS MATERIALS (HAZ)

HAZ01: Spills of hazardous materials could occur during transport along a Lynn Canal Highway, and response would be required.

4.14 LAND USE (LND)

LND01: A highway alternative would improve access to recreation opportunities throughout Southeast Alaska and the interior.

- The highway would improve access to Berners Bay and other areas adjacent to the East Lynn Canal Highway alignments, as well as improve access to recreation opportunities along the West Lynn Canal Highway alignments. Specific recreation opportunities include camping, hiking, mountain biking, horseback riding, snowmachine riding, trail running, fishing, hunting, kayaking, skiing, exploring, picnicking, wildlife viewing, gold panning, recreational mining, and photography.
- The highway alternatives would allow access to surrounding communities as well as the rest of Alaska for recreation; sporting, arts, and other events; road biking and running; and motorcycle, recreational vehicle (RV), and automobile trips.
- Improved access to recreation opportunities benefits people who have economic or physical disadvantages.

LND02: A highway alternative would diminish recreation opportunities and/or experiences in areas crossed by or adjacent to the highway.

Project alternatives that would improve access to Berners Bay, natural and wilderness areas in the Tongass National Forest, or other potential recreation areas along any of the newly constructed highways (East and West Lynn Canal Highway alignments, as well as highways constructed for access to new ferry terminals) would degrade the quality of natural, pristine, and peaceful recreation in these areas.

LND03: The EIS must comply with other management plan designations and allowed uses when determining the preferred alternative.

Highway development would conflict with the following:

- Dewey Lakes Recreation Area designation in the Skagway Area Plan (1999).
- The Tongass Land and Resource Management Plan (TLMP) designations:
 - Land Use Designation (LUD) II Roadless and Wild designation of Berners Bay; Berners Bay cabin; Semi-Remote/Remote Recreation; Semi-Primitive; and Old Growth Reserve Forest.
- The Gilkey and Katzehin River Wild and Scenic River recommendations.
- The Supplemental Draft EIS fails to evaluate the alternatives for consistency with Alaska Coastal Management Program (ACMP) standards, including the habitat standard.
- The historic nature of the Klondike Gold Rush NHP.
- Changing LUDs in the highway footprint to Transportation Utility Systems (TUS) does not affect the obligation to meet Old Growth Habitat and LUD II standards. The EIS needs to discuss how the road would be compatible with the theme of the Old Growth Habitat LUD. The ferry alternatives would meet LUD standards.
- The USFS does not have authority to grant a perpetual right-of-way without an act of Congress.
- Construction of the highway would violate the 2001 Forest Service Roadless Area Conservation Rule that precluded road building in inventoried roadless areas.

LND04: Building a highway may provide future development opportunities for communities and for natural resource production.

Areas identified for potential development:

- Kensington Gold Project
- Other mining development or resource extraction
- Community expansion
- Property development

LND05: Potential future development that could be facilitated by building a highway would diminish the natural values of this land.

Areas of special concern:

- Kensington Gold Project
- Other mining development or resource extraction
- Community expansion
- Property development

LND06: Explain what landowners would gain from allowing highway alternatives to cross their land.

LND07: State the percent of land along the Lynn Canal that is impacted by each of the alternatives.

LND08: Highway alternatives would impact the Lower Dewey Lakes area.

The loss of solitude, quietness, and natural setting due to highway construction and operation is a negative impact to users and wildlife of the Lower Dewey Lakes Recreation Area and should be considered in the evaluation of the different alternatives.

LND09: Address Section 6(f) compliance.

4.15 NATIONAL ENVIRONMENTAL PROTECTION AGENCY (NEPA) (NEP)

NEP01: The Supplemental Draft EIS fails to discuss all major points of view on the environmental impacts of the project alternatives.

The Supplemental Draft EIS presents information that is consistently in favor of highways and against ferries. It provides a biased presentation of the impacts of project alternatives to favor a highway.

- Two federal agencies have highlighted the significance of Berners Bay, and a third federal agency has reminded DOT&PF of the importance of minimizing environmental damage. In light of these agency criticisms, there is no rationale to favor Alternative 2 (Preferred Alternative) (or 2b and 2C) over Alternative 2A since Alternative 2A removes nearly every impact to the productive, sensitive, diverse and very high quality habitats of Berners Bay. No discussion of Alternative 2A's avoiding specific impacts to Berners Bay occurs in the Supplemental Draft EIS. In addition, the Supplemental Draft EIS fails to fulfill 40 CFR 1502.9(a): "Discuss in the draft statement *all major points of view*" on the environmental impacts of the alternatives".
- If the document were fair and balanced, as NEPA requires, it would evaluate obvious benefits of ferry travel: reduction in accidents (to zero), reduction in vehicle owner and operating costs, and reduction in environmental impacts.
- Assessing the loss of wetlands, EFH, terrestrial habitat, old growth forest, and brown bear habitat is required to emphasize the real issues and alternatives with the intended result of helping decision makers understand the environmental consequences (see 40 CFR 1500.1 {c} and .2 {b}). As irretrievable lost resources, they have a monetary value that must be added to the costs of all road alternatives.
- Due to forest and habitat loss, the USFWS sees "no enhancement of the long-term productivity of natural resources, only a loss of existing natural resources. The EIS must evaluate these environmental costs and discuss "all major points of view on the environmental impacts of the alternatives" (See 40 CFR 1502.9{a}). That is, even if DOT does not share the views of USFWS, Environmental Protection Agency (EPA), United States Army Corps of Engineers (ACOE), it must articulate these expert viewpoints and then give a rationale for disagreement.

NEP02: The EIS should state the statutory purposes for which it was prepared.

NEP03: FHWA should provide more oversight of DOT&PF preparation of the EIS.

NEP04: NEPA requires an analysis of the environmental implications of alternatives without consideration of cost.

NEP05: The Supplemental Draft EIS is not clear, concise, and to the point or supported by the necessary environmental analysis.

- The Supplemental Draft EIS fails to accurately summarize the information provided in the technical reports, and the technical reports are too cumbersome to be adequately reviewed.
- The environmental analysis is broken up into so many pieces it cannot be clearly and concisely understood.
- The Supplemental Draft EIS relies on the technical reports and not the issues identified in public scoping.

NEP06: The Supplemental Draft EIS is so inadequate that meaningful analysis is not possible. Therefore, a new EIS must be prepared and re-circulated.

The Supplemental Draft EIS failed to take a hard look at the following significant issues: noise, public safety, ice on the highway, avalanches, vehicle-wildlife collisions, and the AMHS.

NEP07: Analysis of ferry alternatives fails to consider practicable ways of improving ferry service without expenditure of significant public funds.

Regarding maintaining and improving ferry service while reducing costs to the State, the current operation model is outmoded, and other management models exist that are worth considering.

NEP08: The cumulative effects review is insufficient.

- The cumulative effects analysis had weak or incomplete analysis and weak support for its conclusions.
- The document fails to evaluate all reasonably foreseeable effects such as activities at the Jualin Mine, Cascade Point, and the Cape Fox land exchange.
- The scope of the EIS violates NEPA; it should include the Kensington mine and the Cascade Point new growth area.
- The cumulative analysis is inadequate for the following reasons: a 30-year timeframe is inappropriate; the Supplemental Draft EIS contains an inadequate analysis of growth-induced impacts of the Jualin mine, the Cascade Point development, and the Cape Fox land exchange; and the EIS needs to address the requirement to reduce habitat fragmentation in Kensington modified Old Growth Reserves (OGR), including underpasses.

NEPA09: The EPA has assigned a rating of “EO-2” (Environmental Objections – Insufficient Information) to the Juneau Access Improvements Project Supplemental Draft EIS.

NEP10: The EPA has assigned a rating of “EO” (Environmental Objections) to the Preferred Alternative (Alternative 2), East Lynn Canal Highway with Katzehin Ferry Terminal.

NEP11: The EPA believes that the Auke Bay Ferry Alternatives (1, 4A, and 4C) would most effectively avoid and minimize potential adverse environmental impacts.

NEP12: The Supplemental Draft EIS fails to comply with the NEPA, the NHPA, the National Forest Management Act, the Clean Water Act, the TLMP, and other statutory and regulatory requirements relating to transportation planning.

4.16 NOISE (NOI)

NOI01: Increased highway traffic would result in additional noise concerns.

- Alternative 2 would substantially increase noise in Juneau.
- Alternatives 2 and 2C would disrupt residences at the northeast end of Skagway and disrupt the solitude of the recreational area around Lower Dewey Lake.
- Alternative 2 would easily be heard in Haines and it would impact quiet days of boating in Taiya Inlet, Chilkoot Inlet, and Chilkat Islands State Marine Park.
- Noise from off-road vehicles (ORV) accessing the east side of Lynn Canal with Alternatives 2 and 2C would impact wildlife.

NOI02: Noise from avalanche control on a highway would have a negative impact on the quality of life in Lynn Canal.

NOI03: Noise from ferries in Lynn Canal would be more disrupting than noise from cars on a highway.

NOI04: Construction equipment operations, blasting, and other construction noise would disturb the solitude of people enjoying outings and fishing trips.

NOI05: The *Noise Analysis Technical Report* is inadequate.

- Noise measurements are not of sufficient duration.
 - The short-term measurements should be taken for longer than one hour.
 - The long-term measurements should be taken over a longer period than 7 to 10 days, and over a range of seasons.
- The EIS should indicate when the short-term and long-term measurements were taken.
- Projected noise levels are not compared to EPA guidelines.
- No differentiation is made between natural and man-made noise.
- Analysis of noise impacts on Steller sea lions is insufficient.
- Measures proposed to minimize construction noise are not verified.
- Interior ambient noise is modeled instead of monitored.
- There is no analysis of noise impacts in downtown Juneau from increased traffic and congestion.
- The conclusion on the cost of abatement measures is incorrect.
- The analysis of noise impacts from Alternatives 2, 2A, and 2C as the highway drops off the ridge into Skagway is incorrect.

4.17 PUBLIC PROCESS (PUB)

PUB01: The public meetings held to air concerns and opinions on the project alternatives and use of the mall project office to disseminate information are appreciated.

PUB02: Comments provided in the public process should be considered fairly in evaluating the project alternatives.

The Supplemental Draft EIS failed to facilitate informed public involvement in the NEPA process by providing a document that was inadequate and not useful to the public (not concise, clear, or supported by evidence).

PUB03: Votes held in Juneau, Skagway, and Haines on the choice between ferry service and a highway are not being considered by DOT&PF and FHWA and should be documented in the EIS.

PUB04: The comment period was far too short to allow a full analysis of the Supplemental Draft EIS and its appendices; a \$100 printing charge for a paper copy of this critical document is unreasonable and has hampered the review process.

NEPA requires DOT&PF to provide the public with the hard data for evaluating the effects. Readers who relied on the Supplemental Draft EIS had the disadvantage of not having the appendices, which present more complete information.

PUB05: The decision as to which project alternative would be implemented has already been made.

The State has selected Alternative 2 as the Preferred Alternative; therefore, the decision on which alternative to build has already been made.

PUB06: Legal challenges could delay construction of Alternative 2/Preferred Alternative.

- Stop the legal hurdles that waste money and hamper progress.
- Conservation arguments regarding Berners Bay could delay the project in legal challenges for years.
- Environmental groups would fight long and hard to stop the highway from crossing the rivers at the north end of Berners Bay.
- If you proceed with Alternative 2, you would face a barrage of lawsuits that would cost lots of money and delay the project.

PUB07: Cooperating agencies indicate they are willing to provide input for the EIS.

PUB08: Consultations with municipalities and other agencies are inadequate. It is not enough to send these groups letters informing them that the project is ongoing.

DOT&PF has not done the coordination with Juneau, Skagway, or Haines as required by the TLMP and NEPA.

4.18 PURPOSE AND NEED (PAN)

PAN01: The purpose and need is biased towards a highway.

The purpose and need has been defined to guarantee the selection of a highway alternative. For example, the use of user and State costs as purpose and need criteria impose very narrow constraints on the decision-making process and heavily bias alternative selection in favor of a highway.

PAN02: The purpose and need statement is complete and is met by Alternative 2/Preferred Alternative.

PAN03: The stated purpose and needs for the project are not compelling.

The AMHS service in Lynn Canal is a satisfactory mode of transportation in the corridor. The purpose and needs for the project described in the Supplemental Draft EIS are not compelling enough to warrant the cost of constructing a highway.

PAN04: Changes should be made to the purpose and need of the project.

Additional objectives for the purpose and need are:

- Include economic benefit to Skagway.
- Include economic benefit to Juneau.
- Improved efficiency of Alaska state government operations.
- Provide the most environmentally preferable surface transportation alternative.
- Provide safe and reliable surface transportation.

PAN05: Alternative 2/Preferred Alternative does not adequately meet the project purpose and need.

- There is not enough accurate information in the Supplemental Draft EIS to support a conclusion that the Preferred Alternative would significantly achieve the following:
 - Improve capacity to meet travel demand.
 - Increase flexibility.
 - Improve travel opportunities.
 - Reduce travel times.
 - Reduce costs to the user.
 - Reduce costs to the State.
- Operation and maintenance (O&M) costs do not show full life-cycle costs. The Supplemental Draft EIS gave partial information, citing the O&M cost for the road and the No Action Alternative without discussing revenues or long-term costs.
- Without accurate estimates of current and projected transportation demand, it is impossible to evaluate objectively if any of the alternatives provide the capacity to meet the demand.
- Flexibility provided by the highway is severely compromised by its lack of reliability. Haines and Skagway residents use the AMHS to travel to Juneau at about twice the rate

in the winter as in the summer, when conditions on a highway would be unsafe, unpredictable, and potentially closed.

PAN06: A Juneau Access Highway may or may not affect the Capital move situation.

4.19 SECTION 4(F) ISSUES (S4F)

S4F01: Provide further information and/or analysis on Section 4(f) determinations regarding Dewey Lakes Recreation Area, Skagway and White Pass District NHL, Klondike Gold Rush National Historical Area, Berners Bay, and Federal Land designations along the East Lynn Canal.

- The Berners Bay area LUD II and the USFS cabin should be protected by Section 4(f) because a major emphasis for these areas is recreation.
- Bridges over the Jualin mine tram and the Comet/Bear/Kensington Railroad would be a constructive use of historically significant areas, and should be protected under Section 4(f).
- The project would be a constructive and temporary use of the historic properties of Skagway and White Pass District NHL.

S4F02: The City of Skagway should make the Dewey Lakes Recreation Area Section 4(f) significance determination. Section 4(f) regulations state that the official having jurisdiction over the land (the City of Skagway) should make significance determinations.

The City of Skagway values the entire area for its recreational values and passed a resolution in recognition of the trail system, picnic and camping areas, lakes, ponds, glades, alpine meadows and other sites.

S4F03: Explain why only two trails in the Dewey Lakes Recreation Area are considered protected under Section 4(f).

Further analysis is required on Section 4(f), because Section 4(f) applies to the entire Dewey Lakes Recreation Area. The presumption that lands managed for multiple uses are not significant recreation areas is inaccurate.

S4F04: Impacts to the Dewey Lakes Recreation Area trails from the highway alternatives cannot be mitigated by bridges or tunnels.

- The highway would cause temporary and constructive use of the trails.
- The highway overpass and its close proximity to the trail would result in noise-related impacts and impair esthetic attributes of a resource protected by Section 4(f).
- Construction of the bridges would interfere with the activities and purposes of the resources as the trail would be closed during construction.

S4F05: Direct and indirect effects from the highway would impact threatened and endangered species, other wildlife, and critical habitat protected by Section 4(f) while the No Action Alternative would not impact these protected wildlife species and/or habitat.

- The Supplemental Draft EIS has not shown that a prudent and feasible alternative does not exist, and it has not included all possible planning to minimize harm to the threatened and endangered species and critical habitat protected by Section 4(f).

- Traffic would impact wildlife and should be evaluated in the Section 4(f) portion of the EIS.

S4F06: Provide further analysis on impacts to Section 4(f) properties such as the Skagway and White Pass District NHL.

S4F07: DOT&PF should reconsider the Haines/Skagway Intertie as a feasible alternative or eliminate Alternatives 2/Preferred Alternative, 2A, and 2C from consideration due to the cost of the highway components and Section 4(f) considerations.

4.20 SOCIOECONOMIC RESOURCES (SEC)

SEC01: Alternatives that include building any form of a highway are too expensive to build and maintain.

- The monetary costs of construction and mitigation measures needed to construct a environmentally safe and travel-safe highway are too high.
- The monetary costs related to duration of construction and completion of expensive and intensive surveys of wildlife populations are too high.
- Monetary costs to monitor impacts during construction and operation of the highway alternatives, and costs to manage user conflicts, are too high. The EIS should include the costs to assist in evaluating the alternatives.
- Current DOT&PF maintenance on existing highways is lacking, and the ability of DOT&PF to perform maintenance during the winter on the highway is suspect. Maintenance would be costly and dangerous.
- The EIS should detail which Lynn Canal communities would be responsible for highway maintenance and how would this be funded.

SEC02: It is more cost effective to maintain ferry access (with or without improvements).

- The existing ferry system meets the purpose and need statement and is less expensive than building the highway.
- The AMHS can be improved immediately, while highway construction would take time.
- The ferry system has an advantage over a highway, evident by the fact that shuttle ferries would still be necessary during highway closures and highway construction.

SEC03: The highway alternatives would be cheaper than maintaining existing ferry service.

- Building a highway would meet the goals of reducing State transportation costs in the corridor.
- The long-term expense of the current ferry system and the continuous need for upgrades and their associated costs are too high.
- Highway maintenance costs would be lower due to the lack of permafrost in the area.
- Building the highway would avoid costly union labor disputes associated with the current ferry system.

SEC04: The costs for the highway alternatives are underestimated and do not correlate with past and current similar cost estimates (Bragaw Extension, Gravina Access Project, Whittier Tunnel, etc.).

- DOT&PF skewed the cost estimates in favor of the highway alternatives, underestimated construction and maintenance costs, and compared highway alternatives with marine alternatives using different criteria. The EIS should fairly compare alternatives using similar criteria.
- The EIS should go through an impartial third party review of the cost estimates.
- Herrera Environmental Consultants performed an analysis indicating highway estimates were low.
- A geotechnical study should be done for cost purposes to determine the amount of rock excavation required, and determine the types of rockfall and landslide mitigation necessary and associated costs of those resources.

SEC05: Alternative 2B costs would be less than Alternative 2/Preferred Alternative costs.

Alternative 2B would be less costly to construct than Alternative 2 and would still meet the objectives of the purpose and need without building the highway all the way to Skagway.

SEC06: Alternative 3 costs would be less than Alternative 2/Preferred Alternative costs.

Alternative 3 would meet the objectives of the purpose and need, but would be less costly than building the highway on the eastern coast of Lynn Canal.

SEC07: Auke Bay ferry service would provide the most economical means of travel, especially for travelers who are unable to take vehicles up Lynn Canal.

SEC08: The duration of construction of the highway alternatives would be excessive, and paying for both highway construction and maintenance of the current ferry system during construction and as backup during highway closures would be cost prohibitive.

SEC09: The increased cost of maintaining the existing ferry service is justified by the service's convenience and reliability.

SEC10: Ferries are the equivalent of highways in Southeast Alaska and should be subsidized, as are all other highways.

SEC11: Current ferry costs are affordable.

SEC12: Highway alternatives would decrease user travel and shipping costs.

- Highway alternatives would reduce user costs and facilitate less expensive travel than is provided by the current air and ferry services.
- Highway alternatives would further reduce shipping costs, which would in turn reduce the cost of goods in all Lynn Canal communities.

SEC13: Highway alternatives would allow funding from social services that currently subsidizes travel for low-income residents to be more appropriately redirected to assist clients with other needs.

SEC14: Highway alternatives would further assist people in being economically self-sufficient, and would open up new jobs.

SEC15: Costs to travel by any highway alternative would not be appreciably less than by ferry once ancillary costs are included. Annual costs that need to be included are shuttle ferries during highway closures and construction, tolls, taxes, travel accommodations and fuel cost.

SEC16: Highway alternatives would have positive impacts to the quality of life of residents or the unique character of a community or area.

- Highway alternatives would provide increased access and flexibility, reduce user costs, and increase tourism to the enhancement of a community's economy and its ability to strengthen inter-community ties, all of which would improve the quality of life of residents.
- Highway alternatives would combat depression that results from living in a remote location and would facilitate access to friends and family without costly travel expenses.

SEC17: Highway alternatives would have negative impacts to the quality of life of residents or the unique character of a community or area.

- A highway would negatively impact community inter-reliance, traffic, noise from traffic and avalanche control measures, wildlife, wilderness, remoteness, solitude, visual aesthetics, litter, and property values.
- The roadless nature of the area is why people have chosen to live in their community.
- The EIS should analyze other similar highway construction projects to determine the number of independently owned businesses in communities before and after a highway alternative is constructed and to identify the impacts of the alternatives on the locally owned small businesses.
- The EIS should conduct a survey before and after construction of an alternative to document Lynn Canal residents' perceived changes in their quality of life.
- The EIS should include an evaluation of the number of people who would move from their community if a road is built.

SEC18: Highway alternatives would have positive impacts to the economy or the population of one or more affected community.

- Highway alternatives would increase jobs during highway construction, thereby increasing the community populations.
- Highway alternatives would regain lost revenues now spent in Canada.
- Highway alternatives would enable the redeployment of Lynn Canal ferries to improve service to other communities.
- Highway alternatives would provide affordable access, which would facilitate increased tourism.
- Highway alternatives would open up more private and commercial land for development.
- Highway alternatives would make land available to expand the Alaska Electric Light & Power grid to Haines and Skagway.

- Highway alternatives would facilitate commerce with other neighboring communities and Canada.
- Lack of access currently causes younger residents to look for jobs outside of their community. Improved access would encourage youth to stay.

SEC19: Highway alternatives would have negative impacts to the economy or population of one or more affected community.

- Highway alternatives would replace permanent ferry jobs with temporary highway construction jobs.
- Highway alternatives would affect year-round employment, decrease the community populations, and facilitate losses in school enrollment, which in turn, would affect school funding.
- Highway alternatives would negatively impact subsistence and commercial fisheries.
- Highway alternatives would make one or more communities inaccessible.
- Highway alternatives would increase Juneau property taxes.
- Highway alternatives would devastate local businesses that rely on marine- and air-based tourist traffic.
- Increased gas prices would discourage travel to communities that are accessible only by a highway.
- Cruise ships would likely change their ports of call, thereby destroying the economic foundation of individual communities.
- The EIS should conduct a survey to assess the visitor population after highway construction (people travel to southeast Alaska because it has no roads) to determine impacts to the affected communities economy, especially the tourism industry.

SEC20: Highway alternatives would have negative impacts to human and property safety (not associated with avalanches or weather).

- The EIS should address the threat that wildlife-vehicle collisions pose to drivers and outline mitigation measures.
- The EIS should outline the differences in safety for each alternative, in a side-by-side comparison, including mitigation costs for each alternative.
- Driving on a highway of this nature would be dangerous.
- Highway alternatives would increase access to communities for unsavory people, resulting in higher crime rates.
- Travelers could spend all of their money to get to a place and not have the money to support themselves once there. This would be a safety risk to residents of one or more community.
- Long commutes during long dark winter nights with limited support services would facilitate vehicle accidents.
- The EIS should provide documentation of the effects highway access has had on the crime rates of other communities that were recently connected by highways.

SEC21: Highway alternatives would have positive impacts to the infrastructure of one or more affected communities.

- Construction of additional terminals and parking facilities would benefit communities economically.
- Addition of crosswalks and recreational trails would benefit recreational users.
- Construction of a highway would open up land to develop more community infrastructure.
- A highway right-of-way would allow for the placement of utilities, such as gas and electric utility right-of-ways, and improve mail service.

SEC22: Highway alternatives would have negative impacts to the infrastructure of one or more affected communities.

- Highway alternatives would create an influx of traffic, and the lack of RV and passenger vehicle parking at terminal locations and in communities would be a detriment.
- The little available developable land in Juneau would need to be used as parking areas.
- The increase of tourists and visitors from cruise ships is already overwhelming the medical, traffic, and pedestrian infrastructure (clinics, hospitals, parking, sidewalks, footbridges, etc.).
- Infrastructure to support existing or improved ferry service is already in place.

SEC23: Highway alternatives would have positive impacts in access to healthcare and emergency services.

- Highway alternatives would provide reliable access to hospitals and medical appointments in larger communities, and would eliminate additional costs that result from unreliable air and ferry transport, including car rental and hotel accommodations, and time lost due to unreliability of air and ferry services because of weather.
- Because Canada now prohibits international insurance claims, construction of the highway alternatives would allow access to needed medical care within Alaska.
- Highway alternatives would enable first responders to support other communities without having to rely on air and marine transport services.

SEC24: Highway alternatives would negatively impact access to healthcare and emergency services.

- Healthcare providers that rely on the ferry service to access communities on the ferry routes would not be able to provide regular healthcare.
- A highway would not be as reliable as the ferry and would result in delayed medical treatment.
- Accidents on a dangerous highway would overwhelm (cost, manpower, and equipment) already overcapacity emergency services in small communities.
- The EIS should outline responsibilities as to who would provide emergency services in the communities, which community would be responsible for what sections of the highway, and who would provide funding for those services.

SEC25: The State has spent too much money on highway studies.

- Money spent on the studies should be redirected to improve the ferry system.
- A comparison of the costs from previous studies completed over the past 20 years with running a profitable dayboat (ferry) should be included.
- Include the costs of conducting previous and current necessary investigations for implementing an alternative into the final cost of each alternative.

SEC26: Additional household or business owner surveys should be conducted.

- New or additional household and business owner surveys should be conducted to accurately identify the current alternative preferences of the affected communities.
- Data used in the Supplemental Draft EIS are misinterpreted, out-of-date, or incorrect.
- McDowell Group surveys did not adequately represent all of the alternatives or their associated costs and hazards.
- McDowell Group surveys did not include travel time comparisons for the alternatives versus the fast ferry.
- DOT&PF used out-dated or inadequate data to estimate future demand when current data is available.
- Economic benefits, highway conditions, travel time, travel restrictions, summer traffic conditions, and cost of ferry fees were misrepresented or misused by DOT&PF.
- Conduct a new survey to include peoples' perception of their community before highway access and for the 5, 10, and 20 years afterward.
- A new survey would show that statistics on the *M/V Fairweather* would indicate the number of passengers has not increased despite new options and faster service.
- Include statements from business owners in Skagway that reported they were not surveyed.
- The statistics stated in the document do not express a true representative cross-section of the communities and their opinions toward Alternative 2.

SEC27: The cost and benefits analysis methodology does not provide a fair evaluation of the alternatives because it uses inadequate cost/economic data.

The following are requests for additional or more accurate data for the cost benefit analysis to provide better alternative comparisons.

- The use of the AASHTO analysis methods for comparing marine alternatives with highway alternatives is not appropriate because the model was not designed for this type of situation. The analysis should use more accurate 2004 marine highway data for mainline and *M/V Fairweather* costs.
- Accurate costs for Alternative 1 are not reflected in the analysis and should be better presented in the EIS.
- There are discrepancies between appendices and the Supplemental Draft EIS regarding actual costs and average daily traffic (ADT) used in the analysis.

- The benefits of Alternative 2 are overestimated due to inflated assumptions about population growth, use rates, and the opportunity costs of travel delays and due to a failure to uniformly apply the travel delay methodology.
- Traffic forecasts and user cost improvements are not discussed in the user benefits analysis.
- The Supplemental Draft EIS has no costs and benefit comparison of the alternatives to other transportation needs in Alaska. The Supplemental Draft EIS claims to provide these comparisons, but there is no discussion.
- There is no identification of net effects, where project benefits displace existing benefits elsewhere. When benefits occur in one community, the EIS needs to detail losses or impacts in other communities.
- The Supplemental Draft EIS uses current ferry service with fast ferries as the base case, but the benefit analysis uses 2002 traffic data, before improvements were made. This does not accurately describe existing ferry service and handicaps the ferry alternatives.
- The assessment of the increase of traffic, as related to capacity and flexibility, should reflect actual data and trends. DOT&PF predicted travel demand would increase if capacity and flexibility were improved. Since 1997, capacity and flexibility have improved through implementation of dayboat service and the start of fast vehicle service by the *M/V Fairweather*; however, the ADT remained flat.
- Assuming wasted travel time resulting from the difference in ferry and highway as a benefit does not reflect all riders. The EIS needs to incorporate the “AMHS Marketing and Pricing Study 2000,” which found that most people travel for pleasure, and adjust travel delay time, cost, and the benefit of increased flexibility.
- Treating all costs uniformly and consistently makes the ferry alternatives economically superior. DOT&PF used unrealistic assumptions about population growth and use rates, and minimized the effect of travel time delays. Long-term O&M costs are presented using a separate and different analysis.
- To treat alternatives fairly, the EIS needs to discount all costs and benefits over the life of the project using one, consistent discount rate. It needs a sensitivity analysis using a wider range of discount rates, and a comprehensive sensitivity analysis for all significant factors in the user benefits analysis.
- The prediction that highway construction would create jobs and increase revenue, is not supported. Recent studies show that this economic base hypothesis is not accurate in southeast Alaska communities.
- The EIS needs to incorporate ferry walk-on passengers and the positive or negative impacts to them associated with each alternative.
- The EIS needs to use current fuel, labor, and material costs for ferries to provide a more accurate comparison of alternatives.
- The EIS should include revenue earned by the *M/V Fairweather* in north Lynn Canal to provide a more accurate comparison of alternatives.
- Accurate operation costs for ferries and highway maintenance need to be included in the EIS.
- Where applicable, the EIS needs to provide associated negative costs for non-benefits where cost benefits are included.

- ADT on the highway is overestimated in the Supplemental Draft EIS; the EIS should provide accurate ADT.
- The EIS should change average occupation of a vehicle to two, not four, passengers.
- The EIS should include accurate mitigation measures and costs for the highway.
- The EIS should include costs associated with environmental losses.
- The EIS should include non-monetary costs due to the loss of lands along and adjacent to right-of-ways.
- The EIS should include associated income to the AMHS from food, beverage, and room sales.
- All of the highway and marine alternatives should be based on full funding from the start of construction to ensure the assumptions used in the analysis are correct.

SEC28: The construction and maintenance of the highway alternatives would be paid for by gasoline taxes.

SEC29: Include the projected liability and costs due to constructing a highway in a dangerous area.

Additional information regarding the projected liability from lawsuits due to deaths on the highway and lost tourism business because of the long construction period should be included.

SEC30: Highway alternatives would have a positive impact on the fishing industry.

- A highway would allow fresh fish to get to market at a reduced price versus transport on the ferry system. There is quite a premium placed on fresh seafood and that market is growing daily.
- It is currently expensive and logically difficult to fly or truck fish via the ferry to markets in the Lower 48.
- The convenience of a highway to Skagway would open up tremendous opportunities for the fishing industry.

SEC31: Provide data to indicate the amount of money that the State spends to subsidize tourism through ferry travel and provide a comparison of the costs and benefits of this subsidy for each alternative.

SEC32: The north Lynn Canal ferry route subsidizes the majority of the southeast Alaska ferry system.

- If you take away the north route, the State would be required to spend significantly more to subsidize service within the rest of the AMHS.
- The impact and true costs of each alternative upon the continued operation of the whole southeast AMHS should be included in the analysis.
- Building a highway would cause a substantial loss of AMHS revenues, which could threaten AMHS' survival.
- Building a highway would result in decreased State subsidies for the AMHS in order to pay for highway construction or maintenance.

- As AMHS subsidies are often a reason for building the East Lynn Canal Highway, effects of the removal of the AMHS Lynn Canal segment on overall system subsidies, needs to be discussed.

SEC33: Maintenance crews should be located in Juneau and Skagway to share the costs and responsibilities of highway maintenance, snow removal, and emergency response in order to decrease highway closures.

SEC 34: The costs for the marine alternatives are inaccurately estimated and do not correlate with past cost estimates.

DOT&PF skewed the cost estimates in favor of the highway alternatives by underestimating construction and maintenance costs and comparing highway alternatives with marine alternatives using different criteria.

SEC35: The marine alternatives would decrease user travel and shipping costs.

Implementation of the marine alternatives would reduce user costs and facilitate less expensive travel than is provided by the current air and ferry service.

SEC36: The AMHS, as the main transportation system, is what makes southeast Alaska unique and special.

A highway would eliminate unique qualities of having a ferry system as the main mode of transportation. Tourists visit Alaska because of the unique nature and quality of life in southeast Alaska, which is centered on the marine highway. Residents value the quality of life and character in southeast Alaska because it reflects the maritime culture of the region.

SEC37: Highway alternatives, particularly Alternative 2B, should be implemented to provide better access and protect the Haines economy.

SEC38: Construction of the marine alternatives would have a positive impact to the economy or population of one or more affected community.

- Improved ferry service would have a positive economic impact.
- Reliable, convenient, affordable access would facilitate increased tourism.
- Access would facilitate commerce with other neighboring communities and with Canada.

SEC39: The No Action and marine alternatives would have negative impacts to human and property safety (not associated with avalanches or weather).

Existing AMHS service and the marine alternatives, particularly due to the fast ferry, are dangerous; therefore, a highway alternative should be constructed.

SEC40: Construction of a highway alternative would have positive impacts to human and property safety (not associated with avalanches or weather).

Construction of a highway alternative would have positive or negligible impacts to human and property safety.

SEC41: Implementation of the marine alternatives would have positive impacts in access to healthcare and emergency services.

SEC42: DOT&PF should consider negotiating with Alaska Airlines to reduce airfares in and out of Juneau, or the State should subsidize their airfares.

SEC43: Discuss impacts to other transportation projects/maintenance across the state if \$281 million is used to build a Lynn Canal Highway.

SEC44: Divert the funding allotted for the Juneau Access Highway into improving ferry service; this would better meet the needs of Lynn Canal communities.

SEC45: Invest the money allotted for the Juneau Access Highway in the community by funding healthcare, schools, childcare, mass transit, and research.

SEC46: Divert the \$281 million allotted for the Juneau Access Highway into other transportation/maintenance projects around the state.

SEC47: The limitations of the ferry system are acceptable in order to preserve the existing quality of life, views, and environment of the area.

SEC48: Potential tolls, poor winter road conditions, winter road closures, and visual impacts are acceptable consequences of a Lynn Canal Highway.

SEC49: Highway alternatives would create a negative impact on the fishing industry by destroying important fish habitat.

SEC50: Fuel consumption should be reduced and renewable energy encouraged.

- The use of fossil fuels should be reduced.
- The price of oil is escalating and the United States would have to reduce fossil fuel use in the near future.
- The EIS should examine Transportation System Management Options.

SEC51: The EIS should consider the need for additional funds to manage the sport fisheries impacted by improved access.

ADF&G currently conducts fish population surveys to manage fishery resources. The areas that would be opened up to sport fishing by constructing a highway are not currently being surveyed, and additional funds and staff would be required to manage the sport fisheries in the area.

4.21 SUBSISTENCE (SUB)

SUB01: The highway would threaten subsistence resources.

- Many subsistence resources have been lost due to development.
- The pristine wilderness should be preserved for subsistence resources.
- Many tribal entities in the area depend on the fish and wildlife for their survival and cultural heritage.

SUB02: The Supplemental Draft EIS does not sufficiently analyze effects on subsistence resources.

- The highway would open up areas and provide improved access for subsistence and personal use; the Supplemental Draft EIS does not adequately analyze this increased pressure.
- More recent use data is needed to complete and update the analysis, and information on subsistence use by tribal entities should be included.

SUB03: Alternatives 2 or 3 would benefit subsistence users by providing better access and would open up areas not presently available.

4.22 TERRESTRIAL HABITAT (TER)

TER01: The presence of the highway would cause changes in Terrestrial Habitat community structure. Impacts from invasive species could result from the highway alternatives.

- Highways create corridors that provide opportunities for invasive plant species to spread, particularly into open-canopy habitats along the highway alignments.
- The introduction of invasive species could displace native species, resulting in ecological damage. The resulting change in vegetation could also change the community composition and structure of small mammals and birds, a potential change not addressed in the Supplemental Draft EIS.
- The Supplemental Draft EIS does not mention the risk or hazard of invasive species to wetlands, including such invaders as purple loosestrife.
- Provide information on 1) proximity of invaders, 2) mode and rate of dispersal, and 3) effects of invasion in differing wetland types.
- Evaluate the potential traffic volumes and determine the resulting probability of invasive species introduction.
- Invasive species now present in Juneau would spread to Berners Bay.

TER02: Construction of a highway would cause a significant loss of terrestrial habitat, and in turn, would affect wildlife and birds.

- A highway would result in the loss of terrestrial habitat critical to wildlife survival.
- While the Supplemental Draft EIS addresses the quantity of terrestrial habitat lost as a result of the highway, the Supplemental Draft EIS fails to examine its quality.
- Trees and brush would not reestablish along the corridor for many years.

TER03: Construction along the east side of Lynn Canal would impact Old Growth Forest habitat.

- The EIS needs to better assess the impacts of the highway on old growth forests. The assessment must meet the requirements of the Tongass OGR System.

4.23 THREATENED AND ENDANGERED SPECIES (TNE)

TNE01: Highway alternatives may impact terrestrial and marine threatened and endangered species. The highway would cause the displacement of federally listed species.

TNE02: Highway alternatives may impact Steller sea lions and their habitat, including haulouts at Gran Point, Met Point, and Point St. Mary.

- Construction and operation activities and human interaction would disturb the sea lion haulouts and negatively affect the sea lion populations, as sea lions tend to avoid areas with construction noise and human traffic.
- Contaminants found in highway run-off (i.e., hydrocarbons) can have devastating effects on sea lions.
- The cumulative impacts of altering all three haulouts (Gran, Met, and Point St. Mary) would likely have severe repercussions on the southeast Alaska sea lion population.
- The highway would have an impact on the sea lions that pull out near the Katzehin Flats.

TNE03: Highway alternatives may impact humpback whales.

Humpback whales use the marine habitat within the project area. The highway is not in the best interest of the humpback whales.

TNE04: Ferry operations may impact sea lions and humpback whales.

- High-speed ferries increase the risk of collisions with humpback whales and sea lions.
- The *M/V Fairweather* has been reported unofficially as having sucked up sea lions in its intakes.
- Construction, maintenance, and operation of ferry terminals, particularly in Berners Bay, are likely to adversely affect the prey resources of sea lions and humpback whales.

TNE05: Highway alternatives would not impact Steller sea lions or humpback whales.

- It is exciting that sea lion rookeries have been identified and that measures are being made to protect them.
- The highway would have little effect on sea lions, they are resilient and would adapt to increased human interactions.

TNE06: The Supplemental Draft EIS does not adequately address the impacts to Steller sea lions. Provide additional information on proposed mitigation measures and monitoring plans.

- Conduct an expert biological and economic analysis of the impacts to sea lions.
- Include an analysis of reasonably foreseeable actions such as the construction of boat launches or structures along the East Lynn Canal Highway and the potential adverse impacts to sea lions.
- Evidence provided in the Steller Sea Lion Technical Report (Table 1 in Appendix S) indicates that Steller sea lions are at Gran Point for all but about seven days of the year. Therefore, the mitigation of limiting construction only to periods when the haulout is not

used by sea lions does not appear to be feasible. Conclusions regarding timing of construction work are unsubstantiated and seemingly lack authorization by NMFS. Include a discussion of the requirement for a NMFS authorization to construct at Gran Point when sea lions are present.

- Assess the ambient noise level at critical areas and provide additional information on the effect of 30- A-weighted decibel levels (dBA) of noise on sea lions. Explain how average peak hour noise level is an accurate way to evaluate noise-level impacts to Steller sea lions. Use EPA guidelines (55 dBA) for acceptable noise levels around the sea lion haulouts.
- Address the amount and effects of noise on hauled-out Steller sea lions at Gran Point and Met Point from avalanche control measures.
- Evaluate in-water effects of the alternatives on Steller sea lions, particularly the effects from Alternatives 2A, 4B, and 4D. Address the impacts of vessel activity on cooperative feeding in Berners Bay.
- Include the exact number of sea lions in Table 1, Summary of Steller Sea Lion Monitoring at Gran Point, as determined by video camera counts and other studies. Update the current estimates of the eastern and western populations. NMFS requests a copy of the video camera monitoring log data to aid in the documentation of any future changes in sea lion abundance.
- Discuss the effects of the Slate Cove Ferry Terminal on the Slate Creek Cove haulout.
- Mitigation measures listed on page 4-11 of the Supplemental Draft EIS are actually monitoring activities, the results of which should be used to develop necessary adaptive management actions. Mitigation measure number five for threatened and endangered species should include consultation with NMFS.
- The EIS should not confuse adaptation of sea lions to marine vessels and human interaction as mitigation. The proposed mitigation of steep embankments and high concrete barriers is not sufficient.
- Provide the preliminary designs and costs of the screening structures used to shield the haulouts from construction and traffic noise and disturbance, and evaluate the impact of avalanches and wind on these structures.
- Provide viewing platforms that limit the potential for people to interact with sea lions. Impose a fine to those who approach the haulouts.

TNE07: The Supplemental Draft EIS does not adequately address the impacts to humpback whales.

- Evaluate in-water effects of the alternatives on humpback whales, particularly the effects from Alternatives 2A, 4B, and 4D. Address the impacts of vessel activity on humpbacks feeding in Berners Bay.
- Clarify the type of effect Alternative 2A is likely to have on humpback whales and the rationale for that conclusion. The Supplemental Draft EIS says Alternative 2A may affect humpback whales, but then concludes that the build alternatives are not likely to adversely affect humpback whales.
- Clarify whether the humpback whales would have a 330- or 660-foot buffer from pile driving activities. Provide analysis for how this distance has been determined and provide references.

- Provide explanation for the assertion that the humpback whales would go elsewhere when disturbed.

TNE08: Update the Supplemental Draft EIS to reflect the NMFS Biological Opinion written for the Kensington Gold Project regarding Steller sea lions and humpback whales.

FHWA has made a preliminary determination that project alternatives would not likely adversely affect Steller sea lions and humpback whales. In consultations with the USFS on the Kensington Gold Project, NMFS determined that mine activities in Berners Bay were likely to adversely affect Steller sea lions and humpback whales. This determination resulted in the preparation of a Biological Opinion by NMFS released to the public as Appendix J of the Kensington Gold Project Final Supplemental EIS in December 2004. This Biological Opinion and its cited references should be consulted for background information and conservation recommendations to protect sea lions and included in the Administrative Record of the Juneau Access Improvements Project EIS.

4.24 TRANSPORTATION (TRN)

TRN01: Lynn Canal communities need better access.

- Residents of Haines, Skagway, and Juneau need better access to other Lynn Canal communities or to the rest of the state, and the rest of the state and Canada should have better access to Lynn Canal communities.
- Continued controversy surrounds the access issue.
- Alaskans need to have better access to their capital city.
- Some Lynn Canal residents have left or may leave the area due to poor access in and out of the communities.

TRN02: Build a highway to provide improved access for Lynn Canal communities.

- A highway would give Lynn Canal residents, other Alaskans, and Canadian neighbors needed access in, out, and within Lynn Canal.
- A highway would improve access and provide several opportunities for recreation and work for young residents so that they would stay in Lynn Canal after high school or college graduation.
- A highway would give Alaskans better access to the capital city.
- A highway would give non-residents better access to Lynn Canal communities for recreation and commerce.

TRN03: Highway construction would not improve access to the extent that a highway is warranted.

- The East Lynn Canal Highway would provide Lynn Canal residents access to only a few locales, namely other Lynn Canal communities and Whitehorse, because few people have enough free time for highway travel to other locales.
- Few people outside of Lynn Canal and neighboring Canadian towns would, due to time constraints, use the East Lynn Canal Highway to access Juneau, Haines, or Skagway.
- The East Lynn Canal Highway alternatives would reduce access for Haines residents by cutting Haines off from the main components of the AMHS.

- The highway would not be able to meet Lynn Canal transportation needs due to the geographic challenges of the area.

TRN04: Improved access for Lynn Canal is best met with marine transportation.

- The existing transportation infrastructure meets the access needs of Lynn Canal.
- A highway would not eliminate or reduce the need for marine or air transportation.
- Lack of highway access is preferred.
- Marine alternatives or improved ferry service would be the best way to improve access.

TRN05: The EIS should include information regarding access that is not currently included.

- Identify whom the highway alternatives are geared toward.
- Include a discussion on the type of person and what he/she proposed for use of the highway.
- Discuss how seasonal changes in access needs are assessed and how the highway alternatives would meet these needs and to what extent.

TRN06: Current ferry service provides reliable, flexible, and/or convenient transportation for Lynn Canal users.

TRN07: Current ferry service does not provide reliable, flexible, and/or convenient transportation for Lynn Canal users.

TRN08: Marine alternatives or enhanced ferry service would improve the reliability, flexibility, and/or convenience of travel for Lynn Canal users.

One or more of the marine alternatives, or improved ferry service in general, would provide the greatest improvement to the reliability, flexibility, and/or convenience of travel in Lynn Canal.

TRN09: Marine alternatives would not improve the reliability, flexibility, and/or convenience of travel for Lynn Canal users.

TRN10: A highway should be constructed to provide more reliable, flexible, and/or convenient travel for Lynn Canal users.

- One or more of the highway alternatives, or a highway in general, would provide the greatest improvement to the reliability, flexibility, and/or convenience of travel in Lynn Canal.

TRN11: A highway would not improve the reliability, flexibility, and/or convenience of travel for Lynn Canal users to the extent that would warrant constructing one.

- A highway would not provide sufficient improvements to Lynn Canal travel in terms of reliability, flexibility, and/or convenience.
- Highway travel times predicted in the Supplemental Draft EIS are overly optimistic.
- The required shuttle ferry segments of some alternatives would offset any improvements to reliability, flexibility, or convenience gained by the highway segments.

- Potential environmental, economic, and social consequences from highway construction would be too great to sacrifice for more reliable, flexible, or convenient travel.

TRN12: Air travel is the most reliable, flexible, and convenient mode of transportation for getting in and out of Lynn Canal communities.

TRN13: The EIS should provide more data or further analysis, particularly regarding travel times, for the alternatives and other elements relative to reliability, flexibility, and convenience of travel, to eliminate discrepancies in the alternative analyses.

- There is a pro-highway or pro-East Lynn Canal Highway bias in the Supplemental Draft EIS, which affects the accuracy of the alternative analyses.
- Eliminate biased statements, provide further analysis, and incorporate additional information to eliminate discrepancies in the EIS.
- Adjust Alternative 2 travel times to reflect both AMHS capacity limitations during winter weather highway closures, and the wait time likely to be experienced by motorists wanting to access Haines via the Katzehin Ferry Terminal.
- The Supplemental Draft EIS identifies benefits of the East Lynn Canal Highway alternatives that are also benefits of marine alternatives; however, this benefit is not identified in the Supplemental Draft EIS.
- Include the number of actual runs a fast ferry can accomplish in winter because the number is too high in the Supplemental Draft EIS.

TRN14: The current AMHS service meets or exceeds the Lynn Canal transportation capacity demands.

- The current AMHS service provides adequate capacity, and space on the ferries is not inordinately difficult to obtain.
- The fact that the *M/V Fairweather* ran well below capacity despite vastly reduced travel times, and convenient, and reliable scheduling clearly shows that AMHS capacity exceeds demand.

TRN15: The current AMHS service does not meet Lynn Canal transportation capacity demands.

Capacity is particularly insufficient for local passengers and/or their vehicles during the summer tourist season.

TRN16: Marine alternatives or improved ferry service would meet or exceed Lynn Canal transportation capacity demands.

TRN17: Marine alternatives or improved ferry service would not meet Lynn Canal transportation capacity demands.

TRN18: Highway alternatives or other highways would meet or exceed Lynn Canal transportation capacity demands.

TRN19: Highway alternatives or other highways would not meet Lynn Canal transportation capacity demands.

TRN20: The EIS should provide more information or further analysis of Lynn Canal capacity demands and the capabilities of each alternative to accommodate current and future capacity demands.

- Alternative 1 would result in decreased service to the public over time; the Supplemental Draft EIS does not make this point well enough or substantiate it with hard data.
- Analysis of the marine alternatives should include consideration of higher capacity mainliners that could be deployed under any of the alternatives.
- Calculations of capacity for all marine alternatives should be based on the specifications of the mainline vessels that AMHS would be using most in the future.
- The EIS should take into account the limitations of the AMHS to provide enough capacity during extended highway closures to accommodate stranded motorists.

TRN21: Highway construction would impact the AMHS.

- Building a highway would reduce the quality and convenience of AMHS service in Lynn Canal.
- Provide a more complete discussion of potential system-wide impacts to AMHS from highway alternatives.
- Highway construction would not have detrimental impacts to the AMHS.

TRN22: The EIS should include an analysis and discussion of traffic impacts due to slow moving RVs and other sightseeing tourists. Revise traffic volume and time estimate conclusions based on this data.

TRN23: A highway alternative or marine alternatives with service originating in Berners Bay would restrict transportation for current ferry system foot passengers.

- A highway alternative would eliminate or reduce transportation options for foot passengers who currently use the ferry system.
- Ferry foot passengers that do not own a car or have one that is suitable to drive a long distance highway could find traveling on a highway to be cost prohibitive.
- Senior citizens and people with disabilities who are not able to drive would lose the ability to travel between Haines, Skagway, and Juneau.
- Foot passengers would have difficulty getting from ferry terminals at Berners Bay or Katzehin because no method of transportation from the terminals to the towns of destination exists.
- Include a discussion of travel options and public transportation and the challenges, economic and logistics, for foot passengers traveling between Juneau and new ferry terminals.

TRN24: An East Lynn Canal Highway would open the surrounding country and make it accessible to people with physical handicaps.

TRN25: Due to background check restrictions enforced by Canada, many Alaskans may not have access to a new highway in Lynn Canal.

TRN26: A highway would provide evacuation or ingress routes to Juneau in case of a natural disaster or acts of terrorism.

- Another form of access to and from Juneau provided by a highway is necessary when air travel and marine travel are restricted due to terrorist attacks, as was evident following September 11, 2001.
- Additional evacuation options in case of natural disasters, wildfires, or other emergencies are needed.
- The AMHS is a target for terrorist attack due to the concentration of people in one area.
- Services stationed in Juneau could assist other southeast Alaska towns in case of emergencies.

TRN27: A highway in east Lynn Canal would provide potential future transportation benefits or opportunities.

- An East Lynn Canal Highway would eliminate the need for funding the ferry service currently used for the marine route north from Juneau. These funds and services can be redirected and used to improve marine highway service in other parts of southeast Alaska.
- By improving the AMHS in southeast Alaska, Juneau would become a hub on the ferry service for other small southeast Alaska villages.
- A highway alignment would also allow for a gas line right-of-way that would benefit Juneau as a cheap energy source.
- The highway alignment would provide infrastructure for a bus system, as well as make Juneau a logical connection point for goods and a practical place to develop a deep-water port.
- If the East Lynn Canal Highway is built, a future bridge crossing to Douglas Island could be the next reasonable step

TRN28: Re-use of rock material and reduction in excess rock quantity during highway construction should be evaluated.

- Mine tailings generated by the Kensington Mine should be used for fill during construction of an East Lynn Canal Highway.
- Rock generated by construction of a Lynn Canal highway should be used for future applications in southeast Alaska, such as riprap in Yakutat, or stored for future use in paving maintenance as hard rock or asphalt mix.

TRN29: Alternative 2/Preferred Alternative is not consistent with the plans and policies of the Vision 2020 Statewide Transportation Plan, the State Transportation Improvements Program, and the Southeast Alaska Transportation Plan, and therefore is not eligible for federal highway funds.

TRN30: The EIS should update traffic forecasts for the marine options by using time of service, frequency, transit time, and user cost for an optimized ferry system.

TRN31: Lynn Canal air travel is not a reliable, flexible, or convenient form of transportation for accessing Lynn Canal communities.

TRN32: The marine alternatives include a Haines-to-Skagway shuttle ferry that increases capacity on that leg of the system way beyond what is necessary, resulting in unreasonably high costs.

TRN33: Base traffic demand projections on data rather than speculations.

- The Supplemental Draft EIS relies on a prediction of increased demand, but data would show a predicted flat to decreasing demand.
- Data shows that with improved marine access ADT from 1998 to 2002 remained flat, but the Supplemental Draft EIS predicted ADT would be greater than double 2004 peak summer months. This discrepancy should be explained.

TRN34: Include all sources of traffic and the effect on surrounding roads and highways.

- Traffic analysis should include residents traveling to Juneau from Anchorage and Fairbanks.
- Include traffic volume in Skagway and Haines.
- Reanalyze Dyea traffic.
- Provide more analysis on changed use of the Haines and Klondike Highway.

4.25 VISUAL RESOURCES (VIS)

VIS01: A highway would have negative impacts on visual resources, the ferry system should continue as the main mode of transportation to preserve the aesthetic beauty of Lynn Canal. Visual impacts would be harmful to the tourist industry in the area and are not well captured in the Supplemental Draft EIS.

- The highway would have substantial aesthetic impacts on the pristine area of Lynn Canal. The highway would scar the beautiful scenery, interrupt the unspoiled wilderness and destroy the world-class views for thousands of tourists who come to Alaska every year.
- The existing ferry system would help protect one of the most scenic, wild fjords from being scarred by a highway.
- The Supplemental Draft EIS downplays the adverse impacts to visual resources.

VIS02: A Lynn Canal Highway would have minimal impacts on area aesthetics and tourism, and would be one of the most scenic highways in the world. Visual impacts that potentially occur could be mitigated and minimized. The highway would offer affordable and increased accessibility for people wanting to see the beautiful scenery in southeast Alaska.

- The highway would have minimal impacts on visual resources along Lynn Canal and would not be seen by cruise ships traveling the Inside Passage.
- The highway would provide residents and tourists an incredible opportunity for an awesome sightseeing drive and be eligible for designation as a national scenic highway.
- National parks in other parts of the United States have highways and are still beautiful.

VIS03: Highway alternatives would have visual impacts to Skagway, Haines, and Taiya Inlet, including impacts to national historic districts in these areas. The Supplemental Draft EIS photos mislead the public about these impacts and are therefore inadequate.

- The Supplemental Draft EIS states that there are no impacts to the Klondike Park or Skagway Historic District, which is a blatant misrepresentation of the findings in the Visual Technical Report that states visual impacts would be very high.
- The highway would cause cumulative effects on the visual aesthetics of the Skagway Historic District.
- Include a visual representation of the bridge over White Pass rail yards in Skagway.

VIS04: The highway is not visually compatible with the uses of the Dewey Lakes Area. Additional visual representations of Dewey Lakes users' perspective should be included in the EIS.

- The Lower Dewey Lakes area should be set aside and protected from visual impacts from the highway.
- Visual representations of the Dewey Lakes Area should include the hiker's perspective; trail perspectives; and all bridges and tunnels for that area.

VIS 05: The Supplemental Draft EIS does not include mitigation for visual impacts that would be created by a highway.

- The Supplemental Draft EIS states that Visual Quality Objectives would not be met if the highway is built; and yet no mitigation is proposed in the document.
- Specific design elements to mitigate visual impacts should be included in the EIS and concurrence with other agencies on mitigation measures for visual impacts should be undertaken.

VIS06: The visual resources discussion should be more accurate with respect to the TLMP LUDs and Visual Quality Objectives.

4.26 WATER QUALITY, HYDROLOGY, AND FLOODPLAINS (WAT)

WAT01: Impacts to water quality would occur if a highway was constructed.

- Impacts to water quality, such as deposition of hydrocarbons, heavy metals, and sediment, would occur if the highway is constructed.
- Water quality impacts are understated in the Supplemental Draft EIS.
- DOT&PF, in failing to discuss compliance with the Clean Water Act and severity of water quality violations, violates NEPA.

WAT02: Construction of the highway would have significant impacts on hydrology, such as redirection of flow due to bridge pilings.

Site-specific hydrological information and analysis should be included in the EIS for the Lace/Berners, Antler/Gilkey, and Katzehin rivers in order to ensure proper design of the bridge crossings.

WAT03: Degradation of water quality due to highway runoff would occur with the highway.

Pollutants such as de-icing chemicals, Poly Aromatic Hydrocarbons, heavy metals, asphalt and gravel would negatively impact water quality.

WAT04: Assess potential water quality impacts resulting from the release of ferry fuel into waters of the United States.

WAT05: Effectiveness of BMPs administered by DOT&PF on water quality should be documented.

The EIS should include any research or monitoring on whether DOT&PFs BMPs are effective in protecting water quality in Alaska, particularly related to erosion and sediments. If no research on these topics exists, the degree of uncertainty regarding BMPs should be noted in the EIS.

WAT06: The EIS must address the effects of the alternatives on the 100-year floodplains.

- The Supplemental Draft EIS fails to comply with Executive Order 11988, as it only addresses the effects on navigation and the location of bridge piers above the predicted 100-year-flood elevation.
- Include an analysis of the fish and wildlife habitats of the area floodplains, as well as other floodplain functions.

4.27 WETLANDS (WET)

WET01: Highway alternatives would impact wetlands.

- Highway construction would result in the loss of critical wetland habitat, of which the greatest loss would result from Alternative 2.
- Sedimentation from highway construction and pollution from highway use and maintenance (i.e., highway salt, de-icers, petroleum products, exhaust, vehicle brake fluid, and chemical spills) would adversely affect adjacent wetlands.
- The loss of and impacts to wetlands would adversely affect the ecological functions of southeast Alaska.
- The Supplemental Draft EIS fails to comply with Executive Order 11990. If DOT&PF selects any road alternative in the final decision, the EIS would have to show why non-road alternatives are not practicable, according to Executive Order 11990.
- A highway should not be constructed on wetlands.

WET02: The highway would result in negligible impacts to wetlands.

WET03: The Supplemental Draft EIS does not adequately address the highway-related impacts to wetlands. Consider additional mitigation measures and compensatory projects.

- Include an analysis of highway maintenance impacts on subsequent or cumulative wetland degradation.
- Consider a mitigation bank to mitigate the loss of wetlands.

- Consider local projects, including the full restoration of Duck Creek, or accretion of lands along the Mendenhall Wildlife refuge.
- The USFWS is available to assist in identifying and implementing BMPs and other conservation measures, such as mitigation for the loss of wetlands.
- Assess the loss of 31 acres of EFH.
- Consider the unique values and ecological functions of these wetlands and what it means to lose 93 acres of wetland.
- Demonstrate compliance with Executive Order 11990, which orders the FHWA to avoid to the extent possible the long- and short-term adverse impacts associated with the destruction or modification of wetlands and to avoid direct or indirect support of new construction in wetlands wherever there is a practicable alternative.
- The Supplemental Draft EIS states that approximately 67 percent of the wetlands within the project area have been field verified. Field-verify the remaining wetlands and adjust the wetland impact estimates as appropriate.
- Update the base maps used for wetlands classification.
- Discuss the indirect impacts to wetlands throughout Section 4.

WET04: Modifications to Alternative 2B would avoid 4.7 acres of estuarine wetlands.

Suggested modifications to Alternative 2B include moving the Katzehin Ferry terminal south of the Katzehin River Delta, removal of the highway segment north of Katzehin River, and removal of the bridge over the Katzehin River.

WET05: The Supplemental Draft EIS includes insufficient information to demonstrate that Alternative 2/Preferred Alternative is the least environmentally damaging practicable alternative in compliance with the Section 404(b)(1) Guidelines.

WET06: Include a preliminary 404(b)(1) evaluation in the EIS so that the public can review and comment on it prior to publication of the Record of Decision.

The EPA offers technical assistance in developing the preliminary 404(b)(1) evaluation and compensatory mitigation package.

4.28 WILD AND SCENIC RIVERS (RIV)

RIV01: The highway may impact Wild and Scenic Rivers and future Wild and Scenic River designations for rivers within the project would be compromised if the highway is built.

- A highway would degrade the Katzehin River, a National Wild and Scenic River, thereby rendering the protected status insignificant.
- Alternative 2 would not safeguard the potential Wild and Scenic River designations for the Gilkey and Katzehin rivers.
- The USFS has recommended that all rivers within the project area be considered eligible for Wild and Scenic River designations, DOT&PF and FHWA should apply the Alaska National Interest Land Conservation Act standards to these rivers.
- The EIS should indicate that the upper reaches of the Sullivan River are eligible for a Wild and Scenic River designation and that the highway would not adversely affect it.

4.29 WILDLIFE (WLD)

WLD01: Highway alternatives would impact wildlife, habitat, and/or ecology.

- Highway alternatives would destroy habitat and exert pressure on wildlife and lead to a decrease in wildlife populations.
- There is no guarantee that habitat would not be impacted. The highway would create impacts to habitat that cannot be mitigated.
- There would be changes to the wild and biologically rich stretch of coastline.
- Undisturbed wilderness areas are shrinking and have higher value than a highway. Wild areas should be preserved and man-made forms should only be used to reduce wildlife impacts.
- There would be potential impacts to habitats associated with the edge zone adjacent to the highway.
- Subtidal and intertidal habitat would be impacted due to dredging.
- The highway would result in impacts to the Katzehin outwash plain, which provides important functions for wildlife habitat.
- Wildlife would be displaced when disturbed by highways.
- Highway alternatives would change predator-prey dynamics associated with the roadside vegetated corridor.

WLD02: Highway alternatives would impact bears, wolves, mountain goats, river otters, marten, wolverines, moose, deer, porcupine, beaver, lynx, mink, and their habitats.

- The highway could push river otters completely out of the area.
- Animals would not be able to coexist with the highway.
- Bears move between fringe and estuary habitat, and the loss of habitat could reduce the reproductive success or survival of bears. Seasonally important habitat for bears could be impacted.
- A highway would affect feeding patterns of wolverines because they depend on spawning salmon in Sawmill Creek.
- The highway could impact the availability of high quality winter habitat for mountain goat and this is believed to be a limiting factor for mountain goat populations.
- Disturbance to goats is a concern particularly during the winter-early spring when nannies are pregnant and energy reserves are at their lowest.
- Wolverines are generally found in low densities and may be particularly susceptible to impacts because they feed on potentially affected salmon streams.
- The highway may limit access to beaches and riparian areas utilized by wolves.
- Bears and goats would be displaced when disturbed by highways.
- Mountain goats do not readily colonize new alpine ranges. Once this species is extirpated from an area, it can take many years to re-colonize suitable habitat.

WLD03: Highway alternatives and increased ferry traffic may impact marine mammals (other than threatened and endangered species) and their habitat.

- Whales, seals, porpoise, and their associated habitat may be impacted.
- Impacts of the highway alternatives to eulachon runs could cascade up the food chain to marine species that depend upon the fish for survival.
- Marine vessel traffic could disrupt harbor seal pupping season and areas where cooperative feeding behavior occurs.
- Water pollution that results from highway runoff and ferry traffic may impact marine mammals.

WLD04: Highway alternatives may impact birds (excluding eagles).

- The highway could impact hundreds of bird species and migrating waterfowl that utilize Berners Bay and other areas in the Lynn Canal. Berners Bay is an area where 130 species of birds and 40,000 gulls reside at various times throughout the year. Research has shown that Berners Bay spring runs of prey fish provide a critical and timely nutritional pulse for migrating birds.
- Include the American Dipper as a species to be analyzed in the EIS. These birds are a good indicator species for stream quality because they are sensitive to small changes in the environment and depend upon healthy estuaries. Dippers are known to nest in some of the Berners Bay streams and along other areas in the Lynn Canal.
- Baseline studies of goshawk and murrelet populations and critical habitat should be conducted and analyzed in the EIS. Studies should be continued yearly through construction and operation of the highway to ensure adequate conservation.
- Discuss the impacts of hunting season on waterfowl populations in the region.

WLD05: More analysis should be done on potential habitat loss and the impacts on wildlife. The Supplemental Draft EIS underestimates the impacts of habitat fragmentation on bear, moose, and other wildlife. Biological and economic analyses of habitat loss and analyses of dangers to animals from highway construction or maintenance should be included.

- Include more information on wildlife species distributions and population levels.
- Add wolverines to the list of species potentially impacted by increased hunting and trapping.
- Analyze the loss from beach and estuary fringe as compared to other less productive habitats.
- Document critical wildlife habitat, when these areas are utilized, under what conditions, and the migratory behavior of the animals. Consider/indicate seasonally variable suitable habitat and critical winter habitat.
- Update the base maps used to generate species range maps.
- Reassess the quantity and quality of habitat loss. Consider whether habitat loss was within appropriate geographic units and spatial extents. Present the potential loss of habitat associated with edge zone adjacent to the highway in summaries of habitat loss and fragmentation.
- Examine the adjacencies between habitat types, and how this relates to habitat function.

- Provide rationale for considering the loss of habitat over the length of the highway and for utilizing Wildlife Analysis Areas (WAAs). Loss of habitat should be examined in relation to the geographic locale, distribution of animals in this population, and use of habitat.
- Consider that loss of habitat connectivity may be more consequential than the loss of habitat area from a highway.
- Habitat fragmentation needs additional analysis, including consultation with ADF&G on bear collar data. Substantiate that habitat fragmentation is not an issue for moose and has little effect on mountain goats.
- Identify proposed studies on the effects of habitat fragmentation.
- Analyze the impact to small mammals along the highway corridor.
- Reassess the predicted 1 percent impact to goats.
- Estimate the number of wildlife potentially killed by vehicle collisions and the number of accidents that could predictably occur along the highway. Provide more evaluation on impacts from moose-vehicle collisions and the resulting morbidity and mortality rates for humans and moose, including costs of emergency responses.
- Discuss the impacts of avalanche control on goats. Provide information to support the statement that avalanche control would minimize the likelihood of goat mortality from larger avalanche events.
- Clarify the significance of “temporary” impacts. The significance of temporary impacts can depend upon frequency and timing relative to species life history.
- Include goat winter habitat in the *Wildlife Technical Report*.
- Discuss the complications that result from dual management of wildlife on federal land.
- Clarify that the Alaska Board of Game has authority to set seasons, bag limits, etc.
- The Supplemental Draft EIS should provide an explanation of cumulative effects to brown bear population from the Kensington Gold Project and the proposed alternatives.
- Appendix U, page 4-39 appears to suggest that the moose population on the east side of Lynn Canal is limited to the head of Berners Bay. Moose, however, are found throughout the forested habitat that surrounds Berners Bay and north to at least Comet, as is shown in Figure 3-22 of the Supplemental Draft EIS and Figure 3-3 of Appendix Q.
- Examine highway avoidance and the effective loss of habitat associated with avoidance.
- The Supplemental Draft EIS discusses the temporary displacement of wildlife without defining “temporary”.
- Provide an explanation in the EIS for the assertion that wildlife would go “elsewhere”.

WLD06: Habitat and wilderness function and values should be preserved.

WLD07: Further analysis of proposed wildlife mitigation strategies should be prepared. Incorporate monitoring and adaptive management practices.

- Design, discuss, and estimate costs for mitigation measures that would address ORV access, increased human/wildlife encounters, wildlife/dog encounters, wildlife/vehicle encounters, sedimentation and pollution from maintenance activities, disturbances to migrating waterfowl, poaching activities, and habitat fragmentation.

- Provide information on studies proposed by DOT&PF, including population studies that would assess human effects.
- Assess effects of increased harvest on wildlife populations before, during, and after highway construction.
- Assess the location of rest stops and pullouts, and where bear-proof garbage containers should be mandatory.
- Reduce excess rock quantities by incorporating raised grades, flattened slopes, tunnel segments; identify and evaluate methods to minimize impacts of excess material wasting into marine intertidal and subtidal areas.
- Restrictions on highway construction and other activities should be considered as mitigation for impacts to wildlife, particularly during times of reproduction and/or migration. Prohibiting construction activities during January 1 – April 30 (or early winter to early spring) could mitigate impacts to goats from highway construction activities.
- Additional studies of wildlife population levels, seasonal movements, and winter habitat would help to develop mitigation strategies for highway construction, maintenance, and avalanche control measures.
- Analyze the effectiveness of underpass structures, and include what species and seasons are analyzed, for wildlife mitigation.
- Mitigation strategies should be identified to reduce the risk of moose eating roadside vegetation, thereby decreasing the risk of vehicle-related deaths.
- Highway closures during the dark and early morning hours, for example, may reduce the road kill.
- Mitigation strategies should be identified to reduce human interaction with wildlife that may result from increased access and to reduce habitat fragmentation and loss of connectivity resulting from highway alternatives.

The following monitoring or adaptive management practices have been requested:

- Monitor bear harvesting.
- Conduct studies on goat population levels, seasonal movements, and winter habitat use, before, during, and after highway construction.
- Survey wetlands for amphibians prior to highway construction and prescribe the appropriate measures to minimize effects on wetlands documented to support amphibian populations.
- Assess the accuracy of risk probability to identify needs and ensure the success of mitigations.

WLD08: The highway alternatives would result in increased human/wildlife interaction (road kill and wildlife avoidance due to humans/noise/traffic) with negative impacts on wildlife (goats, bears, moose, wolverines, deer, porcupine, and wildlife in general).

- Wildlife management would be needed to reduce impacts from increased hunting, trapping, and potential poaching along or adjacent to any new highway in Lynn Canal.
- Wildlife would be at risk of collision when crossing the highway to feed on shrubs maintained by mowing roadside vegetation or to reach lower elevations, and would be subject to killing in defense of life and property.

- Human and dog interaction/harassment of wildlife would increase resulting in reduced use of wildlife habitat and interference with reproduction.
- Goats are known to be highly sensitive to harassment and sound associated with helicopters and blasting, and may flee or abandon an area.
- Human-triggered avalanches may cause goat mortality.
- The harvesting of bears, wolverines, and other wildlife would increase with human access.
- Increased traffic to wildlife areas would result from road construction.
- The level of human use plays a critical role in determining whether a highway creates a zone of avoidance or an attractive corridor for travel.
- Extend the prohibition on trapping and hunting along any new highway.

WLD09: Highway alternatives may impact amphibians. Include information on amphibian populations and habitat.

- Amphibian populations appear to be declining in the region and little is known about amphibian populations in the project area. Highways could contribute to the decrease in population through habitat loss, alteration, pollution, and vehicle collisions.
- Show that amphibians are also found outside of wetlands.
- A survey of amphibians is needed in order to analyze impacts.
- Evaluate habitats of wood frog and boreal toad.
- Roads could contribute to the decrease in population through habitat loss, alteration, pollution, and vehicle collisions.

WLD10: The Habitat Capability Index (HCI) models are crude and inaccurate, and present the reader with false precision. Provide more information regarding HCI models.

- Clarify how the HCI models are used and for what species, and whether the HCI threshold represents a “significant” impact to that species.
- Provide an opportunity to review the inputs used to run these models in order to validate the interpretation of the model results.
- Clarify for which species is the HCI the best available tool for estimating the relative impact of project alternatives.
- Provide the information that augmented the HCI modeling done in 1997.

WLD11: The diversity of wild animals in Berners Bay, the Katzehin River drainage, and the upper Lynn Canal may change as a result of the highway alternatives.

WLD12: Fragmentation of habitat as a result of the highway alternatives may impact wildlife (goat, moose, bear, and wildlife in general).

- The highway and associated physical barriers such as steep embankments and retaining walls would fragment habitat, thereby preventing wildlife from moving in and out of critical habitat areas.
- The highway alternatives would significantly fragment intact patches of old-growth habitat and reduce connectivity between upland habitats and beach fringe habitat.

WLD13: The highway alternatives would not significantly affect wildlife and habitat.

- Wildlife are resilient and would adapt to the highway or relocate naturally.
- Impacts to wildlife and habitat would be minimal and acceptable.
- Highways currently bind many healthy ecosystems, and there are miles and miles of untracked wilderness unlikely to be threatened by highways.
- Alternative 2B would avoid approximately 180 acres of bear habitat, and is therefore less likely than Alternative 2 to affect wildlife and habitat.
- Alternative 2 would impact less than 1 square mile of habitat, and the highway would make it possible to see more wildlife.

WLD14: Ferry/marine alternatives would have no impacts on wildlife and habitat.

- Ferry service would prevent destruction of thousands of acres of bear habitat. Impacts on wildlife and wildlife habitat from Alternatives 1 or 4A are zero.
- Ferry service is most compatible with wild land conservation.

WLD15: Habitat could be destroyed as a result of increased access for ORV use.

- Habitat could be destroyed as a result of increased access for ORV use.
- Assess the potential for habitat damage from illegal or irresponsible use of ORVs and identify a strategy to manage these impacts. ORV-produced noise, harassment, and pollution could affect wildlife.
- Address the cost of managing ORV access.

WLD16: Incorporate other agency comments and concerns on impacts to fish and wildlife in Berners Bay.

4.30 UNCLASSIFIED (UNC)

Comments that were unable to be grouped under any other SOC where assigned to Unclassified. Comments are grouped into these subcategorical bullets when possible.

- DOT&PF appears to be pushing for a highway regardless of which transportation options best fit the Lynn Canal.
- DOT&PF or the State are interfering with ferry service, taking the *M/V Columbia*, *M/V Fairweather*, and *M/V Kennicott* out of service, making inconvenient scheduling, and raising costs for ferry transportation unnecessarily.
- Analysis within the Supplemental Draft EIS is biased toward a highway.
- DOT&PF and the State continued pushing for a highway despite the Juneau, Haines, and Skagway residents' clear support for improved ferry access.
- People living year-round in the Lynn Canal region do support highway access to Juneau, and their voices should be heard, above voices of tourists and visitors.
- The Supplemental Draft EIS is more than adequate, clear and concise, and full of good analysis.

- The Supplemental Draft EIS is less than adequate, full of fluff, self-fulfilling, speculative, biased, and inaccurate.
- There are deeper reasons for opposing a highway than environmental impacts.
- People who oppose a highway fear the social consequences and these are not reasons to oppose the highway.
- The EIS process of decision-making sets a good example for lessons for seventh grade students leaning decision-making skills.
- The 'Ice Tea' federal program developed in 1998 showed favoritism towards public funding old and poorly maintained highways; and is a natural for the AMHS.
- The decision for a highway should be left up to future generations who will be living here in the next 100 years.
- People who want a highway should move to where there already are roads.
- There is already a road paved on the west side so it seems more feasible to chose a highway alternative on the west side.
- The current congressional delegation and executive branch of Alaska presents a good climate to make the highway happen.
- The decision to construct a highway impacts more than just Juneau but all of southeast Alaska.
- More people in Juneau support the highway than are testifying at the public hearing.
- If there was an anti-road sentiment in the 1940s and 1950s, the highway to Whitehorse and others would never have gotten built, and now those who oppose those highways use them.
- There is a 'not in my back yard' attitude that is keeping Juneau from moving forward.
- The traveler should pay for transportation especially since this would be used mostly for recreation, people should pay for their own recreation.
- If you divide the \$281 million by all residents of Juneau it would be \$9,000, which would go a long way toward transportation projects.
- People are not 'anti-road' they are 'pro-Juneau'.
- Why did ferry fares go up when they moved the terminal from Seattle to Bellingham when now it is geographically closer?
- Change should not be feared; it brings progress and growth.
- I have driven Alaska highways in winter and it is a rough trip.
- What Juneau needs is the wrong question, what Juneau doesn't need is the better question.
- Alaska needs to have a 'get done what needs to get done' attitude reminiscent from the earlier times of developing Juneau and Alaska.
- The proposed East Lynn Canal Highway is a red herring and the highway is really being planned for the west side.
- Would DOT&PF have driven a road in winter and poor weather conditions to attend public meetings in Skagway if a road were there or opt to take the marine highway.

- The NEPA process that uses good science and public process is better than the previous method of decide, announce, and defend.
- I hope that people reviewing the document use God's guidance.
- Why did DOT&PF switch from using a consultant as previously stated in public meetings to completing the Supplemental Draft EIS themselves?
- People who were against the road to Whitehorse (or other roads) now drive there regularly.
- Not true that hundreds of people from Skagway use the Dewey Lakes recreation area as they claim.
- The railroad from Skagway closed due to lost mining revenue, not the construction of the road to Whitehorse.
- If people are worried about crime then they shouldn't live in a city that is already connected to the outside world by road (Skagway).
- The Lower Dewey Lakes Committee was established to protect the area and not act as a roadblock.
- There is no advantage to a longer road if a ferry is still necessary.
- I look forward to riding the ferry when I travel to the school at the University of Alaska Southeast.
- People who want to see Juneau can take existing modes of transportation or live there.
- A decrease in air or marine traffic can be a positive or negative depending on your view.
- The proposed \$25 toll is fine and should increase even to \$100 since things get more expensive.
- Cost of telecommunications has dropped; it would be cheaper for teleconferencing than constructing a road.
- The Supplemental Draft EIS dispelled bad information that was circulating about the project.
- Juneau remains divided over the road issue.
- Environmentalists protest so many projects that they have lost credibility.
- Just because a road is constructed doesn't mean people will drive it.
- Washington state ferries move more people efficiently to and from Seattle than Alaska does for Juneau.
- The state capital of Hawaii also doesn't have a road to it between islands, yet Hawaiians still visit their capital.
- Don't let Southeast Alaska Conservation Council, Lynn Canal Conservation, Inc., or other environmental groups keep Skagway and Haines from having improved access.
- If a highway had been built when the first EIS was done, it would have been paid for by now.
- The cost expended of running the AMHS from Juneau to Skagway would have paid for the road by now.
- The *M/V Fairweather* worked well for an interim period.

- Life is about change and not controlling the environment and how it grows or stagnates.
- People learn to adjust to dangerous highway conditions.
- The people we (Juneau) don't want in town are already there and can't afford to leave.
- I would like better highway maintenance past Tee Harbor.
- Ketchikan needs a road to the backside of the island.
- There are other cultural problems in the world and people lack the awareness of what it means to be on this planet.
- If they build the highway, sell the Haines Borough to Canada; it would be better to be under their government.
- Herbs and plants should be harvested from the highway alignment before construction begins.
- I contracted pleurisy from having to smoke outside in cold rainy weather when on the ferry.
- The highway would still take 20 hours to drive from Anchorage to Juneau.
- The news recently mentioned a railroad to Canada.
- Having Robin Taylor as the head of the AMHS is like having the fox guard the hen house.
- A pioneer grade to Jualin Mine should be done right away to help economic development in Juneau.
- The boxes to use on the website are difficult to understand and the website was not informative.
- The government should be accessible to all people so they can influence their representatives.
- The highway should receive all the funding at once to build at once to ensure assumptions were correct.
- Data shows that southeast Alaska is the only region of the State to be losing its population.
- If a highway were built, there would still need to be funding for a ferry service to Sitka.
- DOT&PF should use local hire for work on construction of the selected alternative.
- This is the most important current event in the region.
- I will not support elected officials who support a road.
- Leave the Permanent Fund alone.
- Juneau, Haines, and Skagway should be considered their own region and a highway would promote this development.
- City Council and media in Juneau are biased and serve small interest groups and their own self-interest.
- The Haines Borough should annex Skagway.
- There is a move in Seattle to build bridges and highways to connect islands with the Olympic Peninsula.

- Ferries are for tourists.
- Alaska should look ahead to plan for infrastructure.
- People travel the road from Seattle to Prince Rupert even in winter regardless of potential avalanche hazards.
- The minority that supports the highway see it as a free ride, the number of people that support the highway would be reduced if a toll was reinstated.
- We support Southeast Alaska Conservation Council's comment letter submitted to DOT&PF (several individuals and organizations made this statement).
- If development is the reason for the highway, this needs to be included in public discussion.
- My longevity bonus has already been revoked and the Permanent Fund is in jeopardy.
- The State keeps the highway from Valdez to Anchorage open as a priority.
- Ferry employees don't work very hard.
- The State needs to continue the mainline ferry service from Sitka to Bellingham.
- If people feel the disadvantages outweigh the advantages of being in Juneau, move out of Juneau.
- The DOT&PF in the future may enact a toll, close the highway from 1 December to 1 April instead of maintaining it, or get complacent till lives are lost.
- It is already difficult to get from Auke Bay to downtown Juneau.
- Skagway enjoys having a highway to Whitehorse.
- Governor Murkowski had previously indicated that the State supports expanding the Alaska Railroad to the lower 48.
- If the issues in Skagway stop the highway at Katzehin, the DOT&PF should stop maintaining the road from Skagway to Whitehorse in the winter.
- Need to keep the public informed of the status of the project.
- A highway is not a transportation method, a car or ferry is and the State should supply me with one.
- People come to Juneau for many reasons and they should be able to drive as well.
- The highway won't get done and it is a selfish and arrogant proposal out of Juneau.
- There was a surcharge at one point on the *M/V Malaspina* as a dayboat.
- We need to encourage intermodel transportation.
- Even with a highway, people would not drive to Juneau in the winter.
- Without a highway from Juneau, we raise children to benefit other communities.
- Due to great distances, people would still choose to fly from Juneau to other parts of Alaska and lower 48.
- This is a huge boondoggle with no documented benefits.
- The State should not spend money to satisfy people's whims.

- It is a terrible idea for the State to be involved with Couer including a ferry terminal with Alaska Industrial Development and Export Authority money.
- Does something need to be extinct before seen as rare or unique?
- The State and federal agencies should move the project forward expeditiously.
- Southeast Alaskans wait for ferries patiently, so should others.
- People in Alaska do not know how to drive in bad winter weather and road conditions.
- Alaska Airlines is reducing the number of flights that will carry fresh fish.
- RVs will come regardless of a highway.
- We have more people that participate in government than any other state.
- Think outside the box.
- I am tired of professional students getting government jobs sucking up wealth from people who do the work.
- The State has put up with liberals long enough and this time is ending soon.
- The highway is only wanted by the people who build them.
- If you choose to live in an area without services that are necessary to you, than you should move to a location with those services.
- Traveling in a covered wagon was difficult, not traveling by ferry.
- Alaskans have everything to gain and nothing to loose with a highway.
- The loss of Richard Dick's contributions to Skagway was a big loss in quality of life in Skagway when he moved to Juneau.
- All data and the process have been taken into account and DOT&PF has been professional and cooperative.
- The Alaska capital and Yukon capital have good relationships.
- I support improved access to Cordova.
- Additionally, many commentors included personal information including their history as an Alaskan.
