

# Klondike Highway Rehabilitation: Skagway River Bridge to Black Lake

State Project No. SFHWY00753

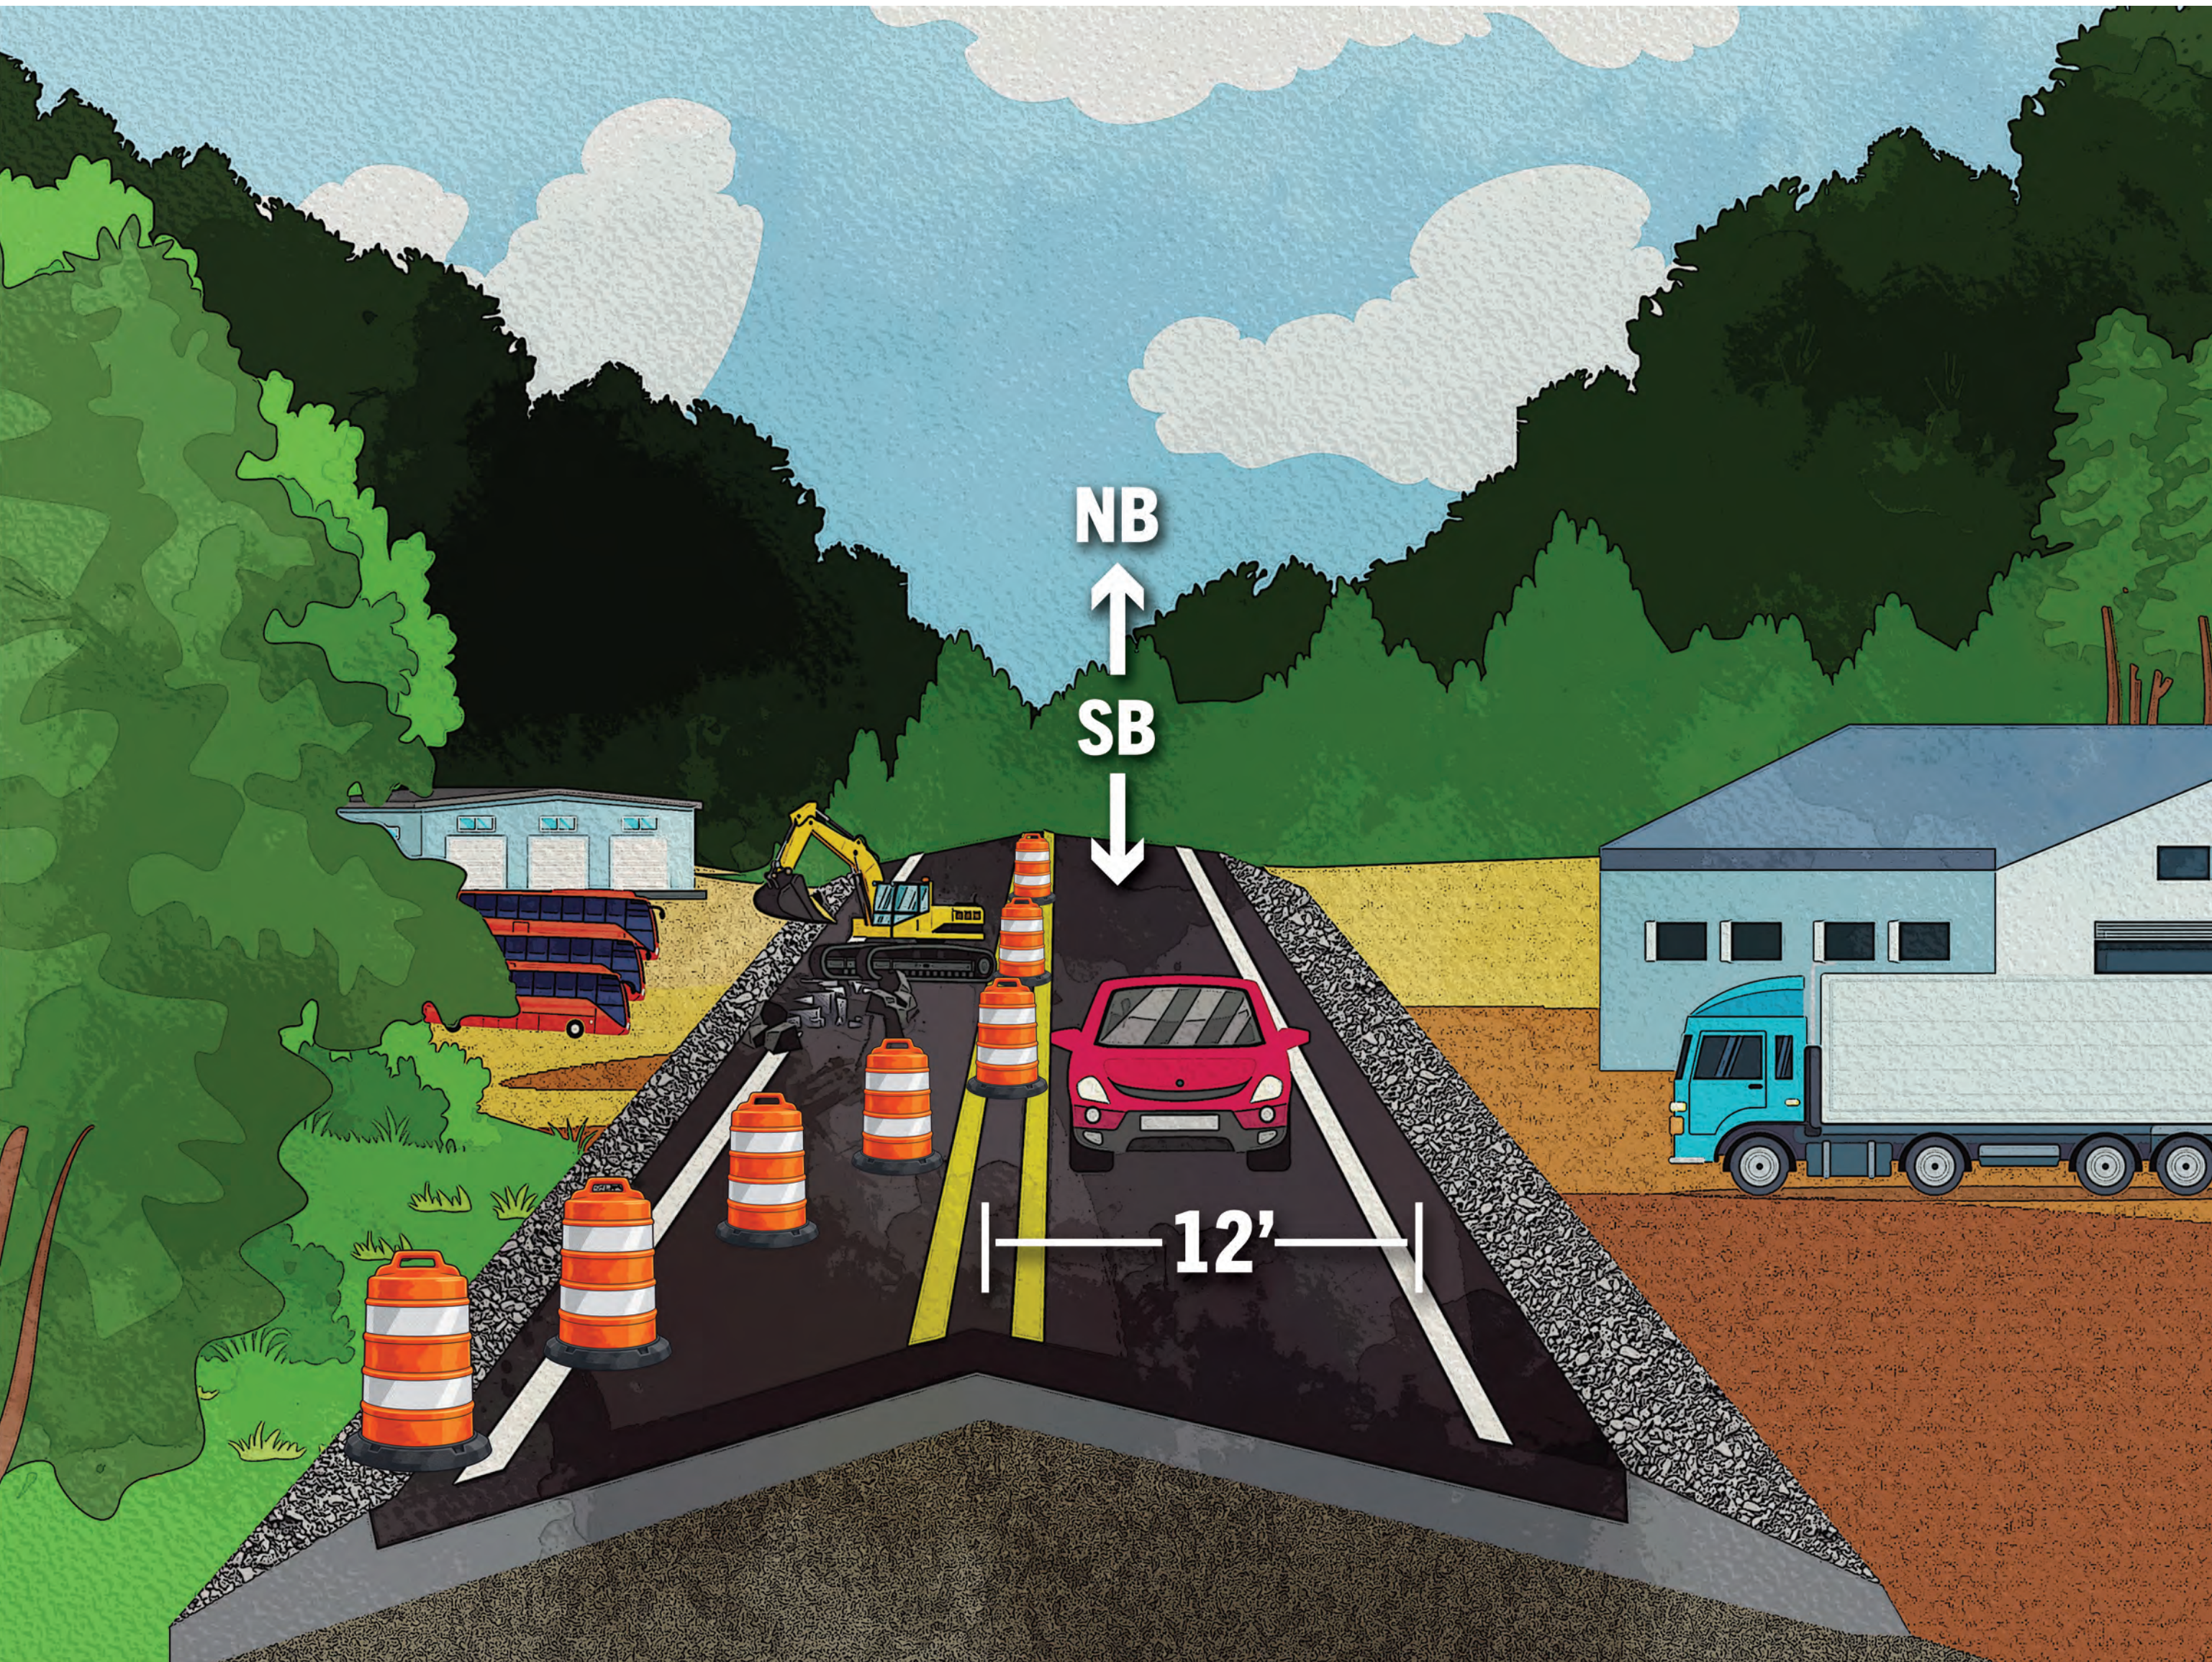

## Temporary Traffic Control: Rockfall Mitigation Locations

### How Will It Work?

Two-way travel will generally be maintained during construction. Single-lane and full road closures will occur when work activities create a hazard to passing vehicles.

## Temporary Traffic Control: Roadway Surface and Structural Section Improvments

### How Will It Work?

Traffic will be reduced to one lane with flagging operations while the opposing lane is demolished and reconstructed. The active traffic lane will then be shifted to the newly constructed side of the highway while the remaining half is completed.
