

## Instructions for updating ASDS Alaska Specific Signs in CAD

### Updating Alaska Specific Signs

Use the .dxf provided and make necessary changes in CAD. You will need to download the FHWA fonts and Highway Gothic fonts to display the .dxf files for Alaska Unique Signs.

There are two ways these fonts can be installed.

The first way is outlined below:

1. Download these files and unzip them.
2. Select the Windows menu and open the Windows Font Settings.
3. Highlight the font files that have the .pfb extension. Click and drag them to the box in the Font Settings window. They should automatically download.
4. Close AutoCAD and open the file again.

If the first way did not work, the Type 1 or the TrueType font files will have to be added to AutoCAD's referenced files. This may need to be IT staff.
