

NOTES ON CONTROL CHART FILES

The control chart files contained here include example data for review. These files have sampling/test reporting as well a spreadsheet input data forms in the first 1 or 2 worksheets. The intent is that data is entered in those first worksheets and the plotting is automatic in following worksheets. To use the control charts the example data must be deleted and the files set up to work for the project.

Some adjustments to chart scales and other formats may be required to work for particular situations. The charts are set up to take input data without skips from top to bottom. Reporting and Input data fields may also need adjustments for the intended use. It is expected that the user will make all adjustments needed to make the charts work as required. Contact Scott Gartin or Greg Christensen with any questions on these charts.
